STRUCTURE · SECTION 1 OF 4

Patron & Chair

Structure

Introduces the Patron and the Chair of the Bangui Declaration, who give the initiative its standing and leadership. Describes their roles in setting direction, convening partners and representing the Declaration at home and abroad.

Full text to follow.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

STRUCTURE · SECTION 2 OF 4

Task Force

Structure

The Bangui Declaration to contribute by

- Identifying and Implementing sustainable Development programmes by Prefecture
- Contributing to national priorities framework
- Retain an updated national Repository of information
- Encourage ESG & CSR principles

1. **Expression of Support.** Participating companies, investors and CAR government agencies to endorse the Declaration's principles under a non-binding Expression of Support
2. **Governance.** Task Force to be established comprising government agencies, companies, investors, multilaterals and other stakeholders.
3. **Task Force** to run on volunteer principles. Patron and Chair will be by appointment. Task Force to meet formally at least four times a year. It is anticipated to form sub-working groups.
4. **Delivery and review.** Tasks to have clear milestones and targets.
5. **Secretariat** will support Task Force and assist in the coordination of the Bangui Declaration's activities. Progress will be tracked between Task Force meetings by the Secretariat.

STRUCTURE · SECTION 4 OF 4

Prefecture Representatives

Role of Prefecture Representatives

Each of CAR's 20 prefectures (including Bangui) to have one Bangui Declaration Prefecture Representative: a respected, non-aligned local figure who reports to Bangui on needs, progress and risks. Recruit organisations first, individuals second: the strongest candidates are usually nominated by an institution that already has trust and reach in the prefecture.

What the representative does

- Reports on local priorities by sector (health, education, water, food security, livelihoods, infrastructure).
- Monitors Declaration-funded activities: are they delivered, to whom, and with what result.
- Gathers feedback from communities, women, youth, minorities and displaced people.
- Attends a monthly reporting and strategy session in Bangui (or remotely when roads or security prevent travel).
- Flags risks early: security, diversion of aid, local tensions.

What the representative is not

- Not a political agent, intelligence source or security informant. Frame the role as *community liaison and monitoring*, never "eyes and ears" in public materials — in CAR's climate that label can put a person at risk.
- Not a cash-handler for programme funds. Keep money flows separate from monitoring.

National networks that reach every prefecture

Approach these bodies once in Bangui and ask each to nominate through its local branches; between them they cover all 20 prefectures. Prefer local branch figures over national leaders, who are often too visible or politically exposed to count as non-aligned.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Network	Why it matters	Local footprint	Caution
Plateforme des Confessions Religieuses de Centrafrique (PCRC)	Catholic–Evangelical–Muslim platform founded 2013; mediates locally; ideal cross-checker	Antenna offices across the country, built with KAICIID support	Best used to nominate a *trio* and cross-vet, not as a single gatekeeper
Catholic dioceses + diocesan Caritas / development offices (CDJP)	Deepest rural presence; run schools and health posts	9 dioceses: Bangui, Berbérati (archdiocese since April 2026), Alindao, Bambari, Bangassou, Bossangoa, Bouar, Kaga-Bandoro, Mbaïki	Pair every Catholic nominee with a Muslim cross-check
Alliance des Évangéliques en Centrafrique (AEC) and member churches	Large Protestant base, strong in the west and centre	Pastors and church development committees in most towns	Varies by denomination; check individual standing
Conseil Supérieur Islamique de Centrafrique (formerly Communauté Islamique de Centrafrique) and the Conseil National des Imams	Essential for trust in the north-east, among Peuhl herders and traders	Imams and mosque committees in every prefecture town	National leadership is close to the presidency; choose locally respected imams
Croix-Rouge centrafricaine (CRCA)	Neutrality is its founding principle; trained volunteers; ICRC-backed	Prefectural, sub-prefectural and local committees nationwide	Do not compromise its neutral status — recruit retired committee leaders, not active staff
Association des Radios Communautaires (ARC-Centrafrique)	Community radio managers know every faction and village; good reporters	Stations in Bangui and most provincial towns	Some stations are church-owned; check editorial independence
Comités Locaux de Paix et de Réconciliation (CLPR)	Grassroots dialogue committees under the Ministry of Humanitarian Action and National Reconciliation (land-links)	Bangui and progressively the provinces	Government-linked: a source of names, not a nominator
Women's organisations: Organisation des Femmes Centrafricaines (OFCA), Association des Femmes Juristes de Centrafrique (AFJC)	Route to women candidates and to GBV-sensitive feedback	OFCA has prefectural branches; AFJC runs legal clinics	Confirm which branches are active
Conseil National de la Jeunesse; Fédération Nationale des Éleveurs Centrafricains (FNEC); Chambre d'Agriculture; Chambre de Commerce (CCIMA)	Youth, herders and producers — key for livelihoods sectors and transhumance tensions	Prefectural delegations	Useful for deputies and sector advisers

The prefectural peace-accord committees (CMOP) are chaired by prefects, so treat them as a briefing partner, not a nomination channel.

PREFECTURES PROGRAMME · SECTION 2 OF 9

Historical Background by Prefecture

Prefecture by Prefecture

Bamingui-Bangoran Prefecture

Snapshot. Bamingui-Bangoran is one of CAR's largest and emptiest prefectures. It covers 58,200 km², and its population was estimated at about 85,500 in 2024. It has two sub-prefectures: Ndélé, the capital and home to roughly 72,000 people, and Bamingui, with about 10,000. Ndélé is a market town east of the Bamingui-Bangoran National Park and Biosphere Reserve. Administratively, the prefecture sits in the "Fertit region" with Haute-Kotto and Vakaga, along the Chad–Sudan frontier zone.

Recent history. The north-east has been the heartland of the ex-Séléka FPRC, which presents itself as heir to the old Sultanate of Dar El Kouti, centred on Ndélé. In March 2020, Ndélé saw fighting along ethnic lines between Runga factions of the FPRC and Goula and Kara armed groups. At least 20 people were killed, more than 10,000 fled, and four international NGOs suspended operations in Ndélé that May.

Bangui Prefecture

Snapshot. Bangui prefecture was created in December 2020. It combines the capital with the communes of Bimbo and Bégoua, which were moved from Ombella-M'Poko. Covering 3,260 km², it held an estimated 1.46 million people in 2024, making it by far the most populous prefecture. In 2021 the population split roughly into 812,000 in Bangui city, 349,000 in Bimbo and 264,000 in Bégoua.

Basse-Kotto Prefecture

Snapshot. Basse-Kotto covers 17,604 km² in the south, and official estimates put its 2024 population at about 393,000. That makes it one of the more densely settled provinces outside Bangui. The capital, Mobaye, sits on the Ubangi River facing DRC, about 104 km by road from Alindao. The prefecture has six sub-prefectures: Alindao (the largest, about 125,000 people), Mobaye, Zangba, Kembé, Mingala and Satéma. It is overwhelmingly rural: in 2021, about 333,000 of 380,000 residents lived outside towns.

Recent history. Basse-Kotto was among the hardest-hit areas of the 2017–2021 conflict between the ex-Séléka UPC and anti-Balaka militias. In 2017, fighting around Zangba and Mobaye sent displaced people across into Ouaka. On 15 November 2018, UPC fighters attacked the Alindao cathedral camp for displaced people, killing at least 112 civilians, including 44 women and 19 children, and burning hundreds of shelters. By 2019, Mobaye was reportedly under joint anti-Balaka and UPC control. Government forces only retook it in May 2021.

Haute-Kotto Prefecture

Snapshot. Haute-Kotto is CAR's largest prefecture at about 86,650 km², but one of its emptiest, with an estimated 144,000 people in 2024. It has three sub-prefectures: Bria (about 102,000 people), Ouadda (about 21,000) and Yalinga (under 5,000). Bria, the capital, is a diamond-mining town on the Kotto River, roughly 600 km north-east of Bangui. The north of the prefecture, around Sam-Ouandja, borders Vakaga and the Sudan frontier zone. Administratively it sits in the "Fertit region" with Vakaga and Bamingui-Bangoran.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Recent history. Diamonds have made Haute-Kotto a prize for every armed group. Séléka rebels seized Bria in December 2012. By 2015, ex-Séléka fighters had occupied the active mining sites around Bria and were charging miners tolls to enter. In 2017, fighting between anti-Balaka and an ex-Séléka faction in Bria killed 22 and displaced 10,000, bringing the town's displaced population to 20,000. The PK3 camp outside Bria became one of the country's largest, holding about 35,500 people by late 2017. In September 2018, nine people from PK3 were abducted and killed during FPRC–anti-Balaka clashes. Government forces only retook Bria in March 2021. Meanwhile, the Lord's Resistance Army (LRA) has raided and abducted civilians in the Sam-Ouandja area for more than a decade.

Haut-Mbomou Prefecture

Snapshot. Haut-Mbomou is CAR's least-populated prefecture, with about 59,000 people spread over 55,530 km², roughly one person per km². Obo, the capital, lies in the far south-east near the borders with DRC and South Sudan; the African Pole of Inaccessibility is 40 km to its north. The main towns are Obo, Zémio, Djemah, Bambouti and Mboki. Obo's prefectoral hospital is the only hospital in the prefecture. Forest covers more than 93% of the land.

Recent history. For over 15 years the area has suffered successive armed groups: the Ugandan LRA, the Séléka, the mainly Fulani ex-Séléka UPC, and now the Azande militia Azandé Ani Kpi Gbé (AAKG). The AAKG emerged in March 2023 as a self-defence force against UPC incursions and seized Bambouti from the UPC that month. It also attacked the army base in Obo in April 2023. In May 2023, fighting between the AAKG and the UPC reached central Mboki, sending about 5,000 people to shelter at a church. The AAKG was nicknamed "Wagner Ti Azandé" after reports of training by Russian mercenaries. By 2025 it had turned against the state: it clashed with army and Wagner forces near Zémio after refusing to disarm, and ambushed a joint patrol in May 2025.

Kémo Prefecture

Snapshot. Kémo covers 17,204 km², and official estimates put its 2024 population at about 197,500. Its capital, Sibut, is a transport hub 188 km north of Bangui at the end of the paved road from the capital, where routes branch north to Kaga-Bandoro and east. The other sub-prefectures are Dékoa, Mala and Ndjoukou. Administratively, Kémo now sits in the "Kaga region" alongside Nana-Grébizi, Ouaka and Ouham-Fafa.

Recent history. Kémo has been a corridor for every armed push on Bangui. Sibut was fought over in the 2002–03 Bozizé rebellion. In 2013–14, ex-Séléka and anti-Balaka forces fought around Dékoa, with reprisal killings and looting in villages toward Kaga-Bandoro. In 2015 a charity network reported that about 73% of schools in Kémo had been attacked or looted. As recently as December 2020, peacekeepers were killed in attacks at Dékoa and near Sibut.

Lim-Pendé Prefecture

Snapshot. Lim-Pendé was carved out of Ouham-Pendé in December 2020. It is small (13,210 km²) but crowded, with about 470,000 people in 2024 and around 35 per km², which is very high for rural CAR. The capital, Paoua, is the birthplace of former president Ange-Félix Patassé. The prefecture has five sub-prefectures, including Paoua (by far the largest, about 307,000 in 2021), Ngaoundaye, Kodi and Taley. Ngaoundaye lies 5 km from Chad and 20 km from Cameroon, making this a cross-border trading and herding zone. The population is overwhelmingly rural: about 394,000 of 442,000 people in 2021.

Recent history. Paoua was largely emptied by rebel and government attacks in 2006–07. Séléka captured it in March 2013, and another rebel group, Révolution et Justice, took it in January 2014. When Séléka occupied Ngaoundaye in late 2013, residents fled in waves into Cameroon and Chad. In January 2018, MINUSCA's Operation Mbaranga secured Paoua and pushed armed groups 50 km out of town. Since then, the main armed

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

actor has been the 3R ("Retour, Réclamation et Réhabilitation"), a group that emerged among Fulani herders. In April 2025, the 3R signed a ceasefire in N'Djamena and began demobilising.

Lobaye Prefecture

Snapshot. Lobaye lies in the forested south-west, bordering both Congo-Brazzaville and DRC. It covers 19,235 km², and its 2024 population was estimated at about 361,000. The capital, Mbaïki, is 107 km from Bangui. The five sub-prefectures are Mbaïki (about 188,000 people in 2021), Boda (about 64,000), Boganangone, Boganda and Mongoumba, on the Ubangi River. Population is overwhelmingly rural: about 313,000 of 345,000 in 2021. The prefecture is the home region of David Dacko, CAR's first president, and has a significant Aka ("Pygmy") forest population.

Recent history. Lobaye was spared the worst armed-group occupation seen in the north and east, but the 2013–14 sectarian violence hit it hard. Mbaïki's previously large Muslim population was driven out entirely during the conflict. Boda, a diamond and gold town, also saw serious intercommunal violence.

Mambéré Prefecture

Snapshot. Mambéré was carved out of Mambéré-Kadéï in December 2020. It covers 15,740 km² and had an estimated 324,000 people in 2024. Its four sub-prefectures are Carnot (the capital, about 160,000 people), Gadzi (about 72,000), Amada-Gaza and Senkpa-Mbaéré. It sits in the "Équateur region" of the south-west alongside Nana-Mambéré, Mambéré-Kadéï and Sangha-Mbaéré. About half the population lives in urban Carnot, an unusually high share for CAR.

Economy. Carnot is one of CAR's main alluvial diamond centres, along with Berbérati and Nola, and artisanal gold mining is widespread across the south-west. In 2016, Carnot was among the first zones cleared to export under the Kimberley Process diamond certification scheme. The last export restrictions were lifted in November 2024. Most mining is artisanal and poorly paid: miners typically sell stones to the collectors who financed their work, far below the value further up the chain.

Recent history. Carnot's defining trauma came in 2014. When Séléka fighters left in early February, anti-Balaka militias stormed the town and attacked its Muslim population, who had lived alongside Christians in relative peace for generations. Around 5,000 people sheltered at the Catholic church. Muslims from Guen, about 100 km away, also took refuge there after an anti-Balaka attack killed at least 70 people. Militias threatened to burn the church, and the priests who protected the Muslims received death threats. In March 2014, peacekeepers escorted the remaining Muslims out of the church and into Cameroon. MSF has supported Carnot's hospital since 2010.

Mambéré-Kadéï Prefecture

Snapshot. Since Mambéré was split off in 2020, Mambéré-Kadéï covers about 13,500 km² in the far west along the Cameroon border, with an estimated 281,000 people in 2024. The capital, Berbérati, is one of CAR's largest towns, with about 104,000 residents in 2021. The sub-prefectures include Berbérati (about 190,000 people), Gamboula on the Cameroon border (about 41,000), Dédé-Mokouba and Sosso-Nakombo. Berbérati is a hub for alluvial diamonds, and artisanal gold mining thrives across the prefecture. It is also the meeting point for CAR–Cameroon border security talks; the fourth round was held there in March 2025.

Recent history. In 2014, after Séléka withdrew, anti-Balaka militias attacked Muslims across the south-west. In Berbérati, thousands of Muslims sheltered inside the Catholic mission and faced stoning if they stepped outside. The church organised convoys to evacuate them to Cameroon, and the priest leading reconciliation efforts received death threats. In 2016, a man working to reconcile Berbérati's Christians and Muslims was attacked with a machete. In late 2021, fighting along the Cameroon border around Gamboula and Amada-

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Gaza, involving armed groups and state forces backed by Russian-linked personnel, displaced thousands into Cameroon and other towns in the prefecture.

Mbomou Prefecture

Snapshot. Mbomou is a large southern prefecture (61,150 km²) on the Mbomou River, which forms the border with DRC. Its estimated 2024 population was about 268,000. The capital, Bangassou, had about 54,000 town residents in 2021. The five sub-prefectures are Bangassou (about 111,000 people), Ouango (about 63,000), Gambo, Bakouma and Rafaï. Nearly 80% of the population is rural. Mbomou sits in the "Haut-Oubangui region" with Basse-Kotto and Haut-Mbomou, and Bangassou is the gateway to the troubled south-east.

Recent history. Bangassou came through the 2013–14 crisis relatively unscathed and was praised for its social cohesion. In 2010, LRA raids had displaced 12,000 people in the prefecture within six weeks. The calm ended in May 2017, when around 600–700 anti-Balaka fighters attacked the UN base and the Muslim Tokoyo district. More than 3,000 people sheltered in the mosque, cathedral and hospital. The imam was shot dead beside Bishop Aguirre while the bishop was helping evacuate the mosque. The UN later put the toll at least 72 Muslim civilians and 12 peacekeepers killed. About 2,000 Muslims spent months under siege at the Catholic seminary, and half of Bangassou's population fled into DRC. Fighting also hit Gambo and Bakouma, and in late 2017 clashes at Dembia burned three-quarters of the village and drove survivors to Rafaï. When JusticeInfo later reported from Bangassou, only 145 of the roughly 2,000 Muslims who fled had returned to Tokoyo, while the rest were still living at the seminary.

Nana-Grébizi Prefecture

Snapshot. Nana-Grébizi lies in north-central CAR, covering 19,996 km² with an estimated 232,000 people in 2024, about double the 2003 census figure. The capital, Kaga-Bandoro, is a market town and diocesan seat. The main sub-prefectures are Kaga-Bandoro, Nana-Outa and Mbrès. It sits on the main north–south road from Sibut toward Chad and is a crossroads for seasonal herd movements. Administratively, it belongs to the "Kaga region" with Kémo, Ouaka and Ouham-Fafa.

Recent history. Kaga-Bandoro was an ex-Séléka stronghold for most of a decade. Séléka took the town in December 2012. In December 2015, rebels declared a breakaway "Republic of Logone" there. By 2016, the town was jointly held by two ex-Séléka factions, the MPC and FPRC. On 12 October 2016, ex-Séléka fighters overran the Évêché camp for displaced people, killing at least 37 civilians and burning about 435 shelters, while peacekeepers failed to stop them. About 20,000 people fled to a makeshift site around the UN base. As late as 2019, four armed groups were present in Kaga-Bandoro. Government forces and their Russian allies only retook the town in April 2021, pushing the rebels north toward Kabo and Batangafo.

Nana-Mambéré Prefecture

Snapshot. Nana-Mambéré lies in the far west on the Cameroon border, covering 26,600 km² with an estimated 372,000 people in 2024. The capital, Bouar (about 72,000 town residents in 2021), is the regional hub for the west and headquarters of CAR's Evangelical Lutheran Church. The four sub-prefectures are Bouar (about 175,000 people), Baboua (about 77,000), Baoro (about 58,000) and Abba (about 31,000). The prefecture straddles the main road between Bangui and Cameroon, through Baoro, Bouar and Baboua, which carries much of the country's imports and fuel. It sits in the "Équateur region" alongside Mambéré, Mambéré-Kadéï and Sangha-Mbaéré.

Recent history. Nana-Mambéré is the birthplace and heartland of the 3R ("Retour, Réclamation et Réhabilitation"), a group that emerged among Fulani herders and is led by Abbas Sidiki. For years the 3R fought anti-Balaka militias around Bouar. In December 2017, the two sides signed a cessation of hostilities in the

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

prefecture, one aim being free movement between Niem-Yéléwa and Bouar. In 2023, Wagner seized the artisanal gold area of Yidéré-Baboua in a military operation that allegedly involved atrocities against nearby communities. It now runs the mines without monitoring or regulation of production or profits.

Ombella-M'Poko Prefecture

Snapshot. Ombella-M'Poko surrounds Bangui on its western and northern sides. It had an estimated 293,000 people in 2024, after its most populous areas, Bimbo and Bégoua, were transferred to Bangui prefecture in December 2020. Boali, about 100 km north-west of Bangui, has been the capital since then. Other main towns include Bossembélé, Yaloké, Damara and Bogangolo. Two strategic assets run through it. The Boali hydroelectric plants supply Bangui and 13 other towns. And the main highway north-west from Bangui passes through Boali to Bossembélé, where it splits toward Bouar and Cameroon and toward Bossangoa and Chad.

Recent history. In December 2020, rebels of the Coalition of Patriots for Change (CPC) attacked Boali during their advance on Bangui; government forces pushed them back in January 2021. Since then the main problems have been farmer–herder violence along the transhumance corridors and incursions by the 3R armed group from the north-west.

Ouaka Prefecture

Snapshot. Ouaka is central CAR's most populous prefecture outside Bangui's orbit. It covers 49,900 km², borders DRC to the south, and had an estimated 459,000 people in 2024. Bambari, the capital, is a major market town on the Ouaka River and the country's main crossroads between east and west. The five sub-prefectures are Bambari (about 217,000 people in 2021), Kouango (about 108,000), Ippy (about 59,000), Grimari (about 51,000) and Bakala (about 11,000). Ouaka holds the Ndassima gold deposit, which the government values at about US$2.8 billion, as well as iron ore deposits at Bakala. Since your repository already includes Ouaka facts and figures, it would be worth reconciling those numbers with the ones here.

Recent history. Séléka captured Bambari in December 2012, and the town then became the headquarters of Ali Darassa's UPC, a mainly Fulani ex-Séléka faction. The UPC took control of the Ndassima mine in 2013. Darassa withdrew from Bambari in February 2017, but the UPC attacked it again in January 2019. Government forces fully recaptured Bambari only in February 2021, and took back Ndassima with Russian support that same month. The government revoked the Canadian firm Axmin's licence for Ndassima in 2019, and in 2020 the mine passed to Midas Ressources, a Wagner-affiliated company. Midas turned it into CAR's only industrial gold mine. In 2023 the US Treasury sanctioned Midas for financing Wagner and for blocking government inspectors from the site. The Sentry has accused Wagner and government forces of displacing, raping and killing residents around Ndassima.

Ouham Prefecture

Snapshot. Since Ouham-Fafa was split off in 2020, Ouham covers about 20,000 km² in the north-west, with an estimated 330,000 people in 2024. The capital, Bossangoa, had about 55,000 town residents in 2021 and is the home town of former president François Bozizé. The four sub-prefectures are Bossangoa (about 167,000 people), Nana-Bakassa (about 56,000), Nanga-Boguila (about 38,000) and Markounda (about 37,000), which borders Chad. The main road from Bossangoa through Nana-Bakassa to the Chadian border is the prefecture's trade spine.

Recent history. Ouham has been at the centre of every pro-Bozizé mobilisation. After Bozizé fell in 2013, anti-Balaka militias formed here. Florent Kema, the anti-Balaka leader at Bowaye, led the second attack on Bossangoa on 5 December 2013 and ordered his men to kill all Muslims. After Bozizé was barred from the December 2020 election, his Coalition of Patriots for Change (CPC) made Bossangoa its operational centre until

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

February 2021, displacing many residents into a camp. The CPC headquarters then moved to Markounda, then Kabo, and finally into Chad. Government forces retook Nana-Bakassa in March 2021. In 2023, Bozizé was sentenced in absentia to life imprisonment with hard labour. Kema later founded the FDLP armed group, which in 2024 joined Ali Darassa's breakaway coalition, the CPC-Fondamentale (CPC-F). Notably, many young people in Bossangoa refused CPC recruitment in 2020, and the prefect has credited local peace programmes for this.

Ouham-Fafa Prefecture

Snapshot. Ouham-Fafa was carved out of Ouham in December 2020. It covers 32,530 km² in the north and had an estimated 239,000 people in 2024. The capital, Batangafo, sits where the Fafa River joins the Ouham. The four sub-prefectures are Batangafo (about 88,000 people in 2021), Bouca (about 81,000), Sido (about 40,000) and Kabo (about 16,000). Sido and Kabo lie on the Chad border, on the seasonal routes herders follow south. More than 80% of the population is rural.

Recent history. Ouham-Fafa has been a crossroads of armed groups for over a decade. In August 2014, clashes between Séléka and French Sangaris forces in Batangafo killed more than 50 people. From late 2014, a displacement camp grew between Batangafo's hospital and the peacekeeping base, housing about 30,000 people at one point. On 31 October 2018, fighting between anti-Balaka and ex-Séléka burned three displacement camps, many homes and the market. More than 10,000 people sheltered in the MSF-supported hospital, and Batangafo became a ghost town. The MPC armed group long held its base at Moyenne-Sido. After the 2020 election crisis, the rebel coalition (CPC) briefly made Kabo its headquarters. Government forces retook Batangafo in April 2021.

Ouham-Pendé Prefecture

Snapshot. Since Lim-Pendé was split off in 2020, Ouham-Pendé covers the hilly north-west around its capital, Bozoum, with an estimated 255,000 people in 2024. The main sub-prefectures are Bocaranga (about 102,000 people in 2021), Bozoum (about 75,000), Koui (about 42,000) and Bossemptélé (about 24,000). Roughly 80% of the population is rural. The area includes key grazing land on the herding routes from Chad and Cameroon, and gold deposits around Bozoum, where government troops were deployed in 2019 to protect Chinese mining companies.

Recent history. Koui, in the north-west, is the home base of the 3R armed group, led by Abbas Sidiki. Violence there in September 2016 drove 15,000 people into Bocaranga. In February 2017, clashes between armed groups in Bocaranga displaced 9,000 more; the offices of the Danish Refugee Council and the International Rescue Committee were looted, one compound was burned, and the market was set on fire. A 3R attack on Bocaranga and Niem in September 2017 sent about 23,000 people fleeing into the countryside. In March 2017, anti-Balaka fighters in Bozoum disarmed UN peacekeepers trying to enter the town. During the 2020 election crisis, CPC rebels captured Bozoum in December 2020, and government forces retook it in February 2021.

Sangha-Mbaéré Prefecture

Snapshot. Sangha-Mbaéré is CAR's south-western corner, bordering both Cameroon and Congo-Brazzaville. It covers 19,412 km² and had an estimated 153,000 people in 2024. The capital, Nola, is a diamond and trading town of about 32,000. The three sub-prefectures are Nola (about 96,000 people in 2021), Bambio (about 25,000) and Bayanga (about 19,000). About 70% of residents are rural. The prefecture's defining asset is the Dzanga-Sangha Protected Areas around Bayanga: a national park and a special forest reserve that form part of a forest landscape shared with Cameroon and Congo. This is one of the last strongholds of the African forest elephant, which gather in groups of 50 to 200 at the Dzanga Bai forest clearing.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Economy and society. The local economy rests on three activities: alluvial diamonds around Nola, logging, and conservation and ecotourism. Nola was among the first mining zones cleared for export under the Kimberley Process diamond scheme in 2016. Two timber concessions operate inside the Dzanga-Sangha reserve. Conservationists are working to ensure they follow approved management plans and protect trees the BaAka depend on for food and rituals. The indigenous BaAka are the largest group living in and around the reserve and make up most of its guides, trackers and anti-poaching staff. Logging roads have historically opened the forest to newcomers, and poverty has driven many of them into poaching gorillas, elephants and antelope for the bushmeat trade.

Vakaga Prefecture

Snapshot. Vakaga is CAR's remote far-north tip, bordering Chad and Sudan. It covers 46,500 km² but had only about 89,000 people in 2024, roughly two per km². The capital is Birao. The prefecture has just two sub-prefectures: Birao (about 76,000 people in 2021) and Ouanda-Djallé (about 7,000), plus 121 villages. During the six-month rainy season, flooded rivers cut Vakaga off from the rest of the country, so its trade and daily life look toward Sudan. Unexploited oil deposits have been identified south-east of Birao. It sits in the "Fertit region" with Bamingui-Bangoran and Haute-Kotto.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

PREFECTURES PROGRAMME · SECTION 3 OF 9

Current Conditions by Prefecture

Prefecture by Prefecture

Bamingui-Bangoran Prefecture

- *Security is improving but still volatile.* Disarmament is under way: in February 2026, nine fighters from the FPRC and the Siriri coalition demobilised in Ndélé. In June 2026, MINUSCA handed its Bamingui base to the government. Risks remain, however. In August 2025, UNHCR described the prefecture as generally volatile, with armed groups robbing, extorting and assaulting refugees and residents. In February 2026, a grenade was thrown into an international NGO's compound in Ndélé, though it did not explode.
- *The Sudan war spills over.* Across the Fertit region, Sudan-linked armed actors and local self-defence groups continue to drive instability. Sudanese refugees are dispersed beyond the main Vakaga camps, and WFP has been feeding refugees in Ndélé among other locations.
- *Rule of law is very weak.* UN monitors found detainees at Ndélé police station sleeping on dirty mats in poorly ventilated rooms, with no state food. There is no functioning prison, so convicted prisoners and suspects are held together.
- *Services are thin and NGO-dependent.* Medical and psychosocial support for sexual-violence survivors relies on Ndélé hospital, INTERSOS and MSF.
- *National context.* About 2.4 million Central Africans (38%) needed humanitarian aid in 2025, against a sharply underfunded response.

Bangui Prefecture

- *Crime has replaced war as the main security threat.* Bangui is politically stable after the December 2025 elections, but several sources report a steady rise in crime-related insecurity. The commercial district is a prime target for banditry, and MINUSCA treats Bangui as a priority area for protecting civilians. The UN recorded about 94,000 internally displaced people in the prefecture.
- *Poverty is high.* Nearly 40% of Bangui residents live in poverty, which is lower than the rest of the country but affects very large numbers of people.
- *Power and water fail regularly.* In January 2026, Bangui went more than a week without electricity or tap water after breakdowns at the Boali hydro plant. Replacement parts must come from China and take at least six months to arrive. National generation is about 100 MW against estimated demand of 250 MW. Because water pumping depends on electricity, every power cut also triggers a water crisis. Residents then queue from before dawn and fall back on wells and rivers.
- *Fuel shortages are recurrent and push up the cost of living.* Shortages recurred in April and November 2025 and again in July 2026. Each time, transport fares rise, adulterated roadside fuel spreads, and household budgets are squeezed. CAR is landlocked and imports its fuel through Cameroon and Congo.
- *Flooding is worsening.* In the Kolongo and M'poko Bac neighbourhoods, around 5,000 people have lived in standing water since the July 2023 floods, exposed to malaria and cholera. Riverside districts such as Petevo, Sao and Île-des-singes face rising Ubangui waters every rainy season.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

- *There are active disease threats.* In June 2026 the government declared a cholera outbreak in the Bimbo and Mbaïki health districts, with 197 confirmed cases and 24 deaths. Cholera is also surging in Zongo, directly across the river in DRC, and Ebola is circulating in DRC.

Basse-Kotto Prefecture

- *Security has been largely restored.* In June 2026, MINUSCA handed its Pombolo base in Basse-Kotto to the government as part of withdrawing from stabilised areas. In April 2025, the UPC, the main armed group in the area, signed a ceasefire and rejoined the peace process, and its fighters have since been demobilising.
- *Displaced people are coming home.* Alindao was a destination for refugees returning from abroad throughout 2025. Returnees need housing, land and livelihoods.
- *Public infrastructure is badly run down.* Local radio has reported residents' alarm at the state of Mobaye's public buildings. Schools, health centres and administrative buildings were looted or wrecked in the conflict.
- *Livelihoods are agricultural.* Subsistence farming dominates, alongside river trade on the Ubangi through Mobaye's river port.
- *National context.* About 2.4 million Central Africans (38%) needed humanitarian aid in 2025, against a sharply underfunded response. Stabilised areas like Basse-Kotto are likely to be deprioritised.

Haute-Kotto Prefecture

- *Russian forces dominate the mining economy.* The Wagner Group has extended its control over rich mining sites in eastern CAR, including Bria and Sam-Ouandja. Civilians and miners told investigators it uses terror to enforce a monopoly. In April 2024, Russian forces raided a camp near Sam-Ouandja in a failed attempt to capture LRA leader Joseph Kony.
- *The LRA is still present.* In January 2026, 12 women and children escaped Kony's faction and reached Sam-Ouandja. In February 2026, Haute-Kotto recorded more grave violations against children than any other prefecture, after child victims who had escaped the LRA reached the prefecture.
- *Sudan spillover is reaching the north.* In March–April 2026, Russian-linked security personnel clashed with Sudanese armed elements on the Sam-Ouandja–Ouanda-Djallé road. More armed deployments along key roads have created a climate of fear that restricts movement and livelihoods. Sudanese refugees are also dispersed in Haute-Kotto, beyond the main Vakaga camps.
- *Protection risks remain high.* In July 2026, the Protection Cluster listed Haute-Kotto among the prefectures still recording serious abuses: killings, sexual violence, abductions, extortion, road occupation and illegal taxation. It also lists Haute-Kotto among the areas with high child recruitment by armed groups.
- *National context.* About 428,000 people remain internally displaced nationwide. The 2026 humanitarian plan needs about US$264 million for 1.3 million people but is so underfunded that agencies are cutting to the bare minimum, and protection monitoring has shrunk by about 30%.

Haut-Mbomou Prefecture

- *This is currently CAR's most violent prefecture.* Heavy fighting between the army and the AAKG broke out around the December 2025 elections. On election day, the Bambouti sub-prefect and a gendarme were abducted. Zémio was attacked again in early January 2026, and about 2,000 people sheltered in the church and hospital while others fled into DRC. In February 2026, Haut-Mbomou recorded more human rights violations than any other prefecture.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

- *Bambouti is largely empty.* In February 2026, a UN team found the town largely deserted and its infrastructure looted, though security had improved enough to consider returns. The hostages taken in December were confirmed alive at that point, and the government has signalled openness to dialogue.
- *Abuses come from all sides.* In March 2026, the AAKG ambushed an army patrol near Obo, while government soldiers and Russian-linked personnel looted eight families' homes near Obo. The July 2026 Protection Cluster analysis reports killings, abductions, sexual violence and forced recruitment by state forces, the AAKG and a resurgent LRA around Djemah, plus tension toward the Muslim community after clashes in Zémio in June. Peuhl herders were twice barred from Zémio market, and about 1,500 left the area in February 2025.
- *Mass displacement with little aid.* The south-east hosts about 30,000 displaced people. Attacks on humanitarian teams forced aid operations in Haut-Mbomou and Mbomou to be temporarily suspended. The 300 km road from Bangassou to Zémio takes 16–17 hours and is unsafe. Zémio's secondary school had only 72 students, down from 992 the year before.
- *There are some returns.* Reopening a secured river crossing at Zémio in February 2026 let about 700 people return from DRC.

Kémo Prefecture

- *Security is improving but fragile.* Nationally, fighting slowed in 2025 for the first time in years, and elections were held in December. In June 2026 MINUSCA handed its Dékoa base to the government as part of withdrawing from areas judged stabilised. That makes Kémo a "consolidation" prefecture, where security now depends on national forces.
- *Farmer–herder tension is the main live threat.* In January 2025, transhumance-related violence east of Sibut displaced residents toward Mala, and a Peuhl herder was killed in an attack near Galafondo, south of Sibut.
- *Health has a bright spot.* With World Bank support, the Sibut district hospital has a new maternity unit and offers a full package of care. Its medicines still have to be trucked from Bangui, and rural areas are far less well served.
- *Livelihoods are agricultural.* Cassava and groundnuts are staples, with sesame also grown, and the Sibut market is the region's commercial anchor. Rainy-season flooding and impassable roads periodically cut off farms and markets.
- *National context.* About 2.4 million people (38% of the population) needed humanitarian aid in 2025, and roughly one in three Central Africans is acutely food insecure. Funding cuts have shrunk the humanitarian response, so stabilised areas like Kémo are likely to be deprioritised.

Lim-Pendé Prefecture

- *The 3R remains active despite the peace deal.* According to the July 2026 Protection Cluster analysis, demobilisation has progressed but unevenly, and the 3R still holds armed positions across rural Lim-Pendé. Tensions with the army rose after three 3R fighters were killed at an army checkpoint, creating uncertainty around Pougol and Paoua.
- *Sexual violence is the defining abuse.* In February 2026, every case of conflict-related sexual violence attributed to signatory armed groups nationwide involved the 3R in Lim-Pendé. In one incident, 3R members abducted a 15-year-old girl and seven women from their fields at Tatou and raped them. Further cases have been documented in Tatum, Doula, Lemouna and Boko-Mboussi.
- *Farmer–herder violence is rising.* Revenge attacks linked to crop destruction and cattle theft killed and injured people at Galé 2 and Bondondi. Nationwide, 601 transhumance-related incidents were recorded

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

in the first half of 2026, with destroyed crops the main trigger. The north-west, including Lim-Pendé, is a principal hotspot.

- *State forces are part of the problem.* There are reports of arbitrary arrests, cruel treatment and extortion by soldiers, sometimes alongside Russian-linked personnel. In February 2026, a dispute between two soldiers at Taley ended in a shootout that killed both.
- *Cross-border pressures.* During an earlier influx, more than 37,000 people fleeing violence in southern Chad gathered at the border, and the most vulnerable were resettled at Bétoko in Lim-Pendé.

Lobaye Prefecture

- *Security is stable.* In June 2026, MINUSCA handed over seven bases, including its Mbaïki base, at a ceremony in Mbaïki itself. That makes Lobaye one of the "stabilised" prefectures where security now rests with national forces.
- *Rural poverty is the core problem.* Most inhabitants are coffee farmers and are extremely poor. Few children reach secondary school, and many die for lack of medical care. Coverage during the December 2025 elections described a farming and forestry economy facing serious infrastructure and development gaps, with a young, growing population short of opportunities.
- *There is an active cholera outbreak.* In June 2026, the government declared CAR's fifth-ever cholera outbreak, centred on the Mbaïki and Bimbo health districts, with 197 confirmed cases and 24 deaths.
- *Logging is displacing forest peoples.* Industrial and illegal logging is clearing forest that Aka communities depend on. At Mbata, about 110 km from Bangui, living conditions have worsened since loggers arrived in the 1980s, and some Aka now cross into DRC to find intact forest. A 2025 study found Lobaye's Aka are being dispossessed without compensation, and their customary land rights are not recognised.
- *Mining is controlled by outsiders.* Wagner has extended its control over rich mining sites, including Boda.

Mambéré Prefecture

Relatively calm, but mining is controlled by outside armed actors. Mambéré features little in recent conflict reporting. But across CAR, mines have become the economic core of Russian operations. Control passed from Wagner to the Russian defence ministry's Africa Corps after 2023, and production and profits are neither monitored nor regulated.

- *Artisanal miners remain poor.* The Kimberley Process embargo often hurt artisanal miners more than armed groups, and its abrupt lifting in 2024 has not yet translated into better incomes or governance.
- *The Muslim community has never fully returned.* Its absence has hollowed out the trading and livestock networks it used to run.
- *Neighbouring areas remain unstable.* Elsewhere in the Équateur region, the 3R armed group was still levying illegal taxes and abducting civilians in early 2026.

Mambéré-Kadéï Prefecture

Generally calm, with insecurity on key roads. A September 2026 UN report describes the area as broadly calm. But attacks on herders and traders continue on the Berbérati–Sosso-Nakombo road, especially around Benewayo. UN police now patrol daily on the roads to Carnot, Sosso-Nakombo, Nola and Gamboula, and traders and transporters say this has restored confidence to travel to markets.

- *Movement restrictions are among the country's worst.* In the first half of 2026, the Protection Cluster ranked Mambéré-Kadéï among the prefectures most affected by restrictions on movement and forced displacement, citing illegal checkpoints, extortion, abductions and threats.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

- *Armed groups are still active at the margins.* In June 2025, the army and Russian-linked personnel clashed with the 3R at Yamalé, 103 km from Berbérati, and residents fled to Bania. In February 2026, anti-Balaka fighters led by a self-proclaimed "General" Ndalet were reported moving and trying to settle near Nandobo, 45 km north of Berbérati.
- *Farmer–herder tension persists.* Residents credit dialogue on respecting cattle corridors with easing long-standing conflicts, but transhumance remains a flashpoint.

Mbomou Prefecture

The Haut-Mbomou crisis is spilling over. The Azande AAKG militia is active in Mbomou as well as Haut-Mbomou. On 3 February 2026, it attacked an army detachment at Dembia, wounding two soldiers and briefly displacing civilians. In March 2026, overcrowding in Bangassou's prison meant children were held with adults, and Peuhl herders were detained illegally in Bangassou and Bakouma until UN advocacy secured their release.

- *Displacement is high.* As of March 2026, Mbomou had nine displacement sites: four at Rafaï, three at Bangassou and two at Bakouma. In 2025, about 1,500 Peuhl driven out of Zémio resettled around Bakouma. In July 2025, WHO reported that Rafaï's secondary hospital was strained by displaced arrivals.
- *Aid access is fragile.* Attacks on humanitarian teams forced temporary suspensions of operations in Mbomou and Haut-Mbomou. A hospital in Mbomou was entered by militiamen hunting for wounded soldiers. The road from Bangassou to Zémio takes 16–17 hours and is unsafe. The July 2026 Protection Cluster analysis ranks Mbomou among the three prefectures at highest risk of attacks on civilians.

Nana-Grébizi Prefecture

- *The peace process is advancing.* On 19 November 2025, the MPC signed an agreement in N'Djamena committing to end its activities in Kémo, Nana-Grébizi and Ouham-Fafa and rejoin the national peace accord. Its disarmament resumed in mid-2026.
- *Kidnapping and armed movements persist.* In March 2026, armed men abducted several civilians at Grevaï, 30 km east of Kaga-Bandoro, and there were further reports of kidnappings, hostage-taking and armed movements around the town.
- *Farmer–herder friction is a leading risk.* In February 2026, farmers at Kaga-Bandoro and Nana-Outa reported fresh destruction of their fields by Peuhl and Mbororo herds, raising the risk of intercommunal violence.
- *The security transition carries risks.* MINUSCA is closing its Mbrès base. The July 2026 Protection Cluster analysis names Nana-Grébizi among the prefectures where base closures create a real risk of worsening protection for civilians.
- *Displacement and weak services persist.* As of March 2026, Kaga-Bandoro still had eight sites for displaced people. Detention conditions were poor, with an old house in use as a holding facility. Aid agencies have also supported Sudanese refugees at Kaga-Bandoro.

Nana-Mambéré Prefecture

- *3R disarmament is under way but incomplete.* Since the April 2025 N'Djamena agreement, 3R fighters have been disarmed in stages, including at Bouar and Koui. A further operation for 100 3R fighters was planned in mid-2026 at Ndongué-Douane in Nana-Mambéré. In June 2026, MINUSCA also handed its Dilapoko base to the government.
- *Residual 3R violence continues.* On 10 February 2026, 3R members abducted six civilians, including a 73-year-old village chief, at Gobolo, 129 km west of Bouar. In March 2026, 3R members awaiting disarmament were still taxing livestock illegally at Zotoua, 25 km south of Bouar. Four artisanal miners

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

were then killed and a camp burned at Zotoua-Banguerem, with 3R members suspected. Clashes between 3R factions, one apparently working with Russian-linked security personnel, raised concerns about armed groups operating alongside state-affiliated actors.

- *Justice capacity is growing*. MINUSCA has supported court open days and prison reform in Bouar to improve access to justice.

Ombella-M'Poko Prefecture

- *Farmer–herder violence is close to the capital*. Between 1 and 18 January 2025, five men were killed, including four Peuhl herders around Bouboui, 35 km from Bangui. Eight more herders were wounded and livestock was looted, with further incidents around Boali and Bossembélé. In February 2026, near Sakoussa, 18 km east of Bangui, a Peuhl herder was killed in revenge for the deaths of four hunters days earlier, and security forces deployed to prevent escalation.
- *3R violence extends this far south*. In February 2026, 3R members repeatedly attacked and looted civilians at Bobala, displacing residents. In March 2026, about 50 3R members abducted two men at Bougoula on the Boali–Poste road. One was killed when his family could not pay a ransom of 3 million CFA francs (about US$3,000). Armed men also attacked an army position at Bogoula, 53 km from Bangui, wounding two soldiers.
- *Movement restrictions and community violence are widespread*. The July 2026 Protection Cluster analysis ranks Ombella-M'Poko among the prefectures most affected by illegal checkpoints, extortion, abductions and forced displacement. It also lists rural Ombella-M'Poko among the areas worst affected by witchcraft accusations and mob justice. The prefecture remains a main hotspot for transhumance conflict.
- *Some state presence is improving*. In February 2026, MINUSCA handed a rehabilitated court in Bossembélé to national authorities. In March 2026, there were post-election tensions in Bossembélé after legislative results were confirmed.
- *Boali's power plant is fragile*. In January 2026, breakdowns at Boali left Bangui without electricity or tap water for over a week, and replacement parts take at least six months to arrive.

Ouaka Prefecture

- *The UPC is demobilising*. The UPC signed a ceasefire in April 2025, and its disarmament was formally launched with Darassa at Maloum in July 2025. Former UPC and 3R fighters began training in March 2026 to become forest and water rangers.
- *Mining violence is the main flashpoint*. On 26 March 2026, a self-defence group called the "Wagner noirs", reportedly operating alongside Russian-linked security personnel, opened fire at Ndassima, killing at least four artisanal miners. Reprisals destroyed the town hall at Ndjoubissi and caused widespread panic.
- *State forces are a source of abuse*. Soldiers, gendarmes and police continued to levy illegal taxes at checkpoints around Bambari in 2026. In February 2026, a dispute between soldiers near Bakala ended in a fatal shooting. Bambari's gendarmerie held 20 detainees for one to two weeks. The central prison is overcrowded, with a food allowance of only 93 CFA francs (about US$0.16) per prisoner per day.
- *Displacement and community violence persist*. As of March 2026, Ouaka still had 12 sites for displaced people: eight in Bambari, three in Ippy and one in Bakala. The Protection Cluster names Bambari and Ouaka among the areas worst affected by witchcraft accusations and mob justice.
- *The security transition carries risks*. In June 2026, MINUSCA handed its Ippy and Kouango bases to the government. The Protection Cluster lists Ouaka among the outlying prefectures where base closures risk worsening protection for civilians.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Ouham Prefecture

- *Residual rebels and abuses by state forces both persist.* In March 2026, attacks by CPC-affiliated anti-Balaka and the FDLP, along with farmer–herder clashes, caused civilian casualties and displacement. On 2 March, FDLP fighters attacked a mining site at Fiessa near Markounda, killing three Chadian nationals. From 11 to 13 March, a joint operation by soldiers, Russian-linked personnel and UPC members acting as intermediaries at Bowaye looted a health centre, burned houses and forced residents to flee. An FDLP commander arrested at Kouki on 18 March was handed to Russian-linked personnel without judicial notice, and his whereabouts were unknown at the time of reporting.
- *Disarmament is slow.* UPC fighters had been waiting at Kouki since June 2025 to disarm, which the UN said heightened protection risks. A disarmament operation for 120 UPC and 80 MPC fighters at Kouki was finally scheduled for June 2026.
- *Farmer–herder violence is deadly.* In February 2026, transhumance-related incidents in the north-west killed five civilians and injured at least seven, including at Bobéré and near Bokine, just north of Bossangoa. The Protection Cluster names Ouham as one of the main transhumance hotspots and as a prefecture with high child recruitment.
- *There are signs of progress.* UN monitors found detention conditions satisfactory at Nana-Bakassa gendarmerie after infrastructure improvements. MINUSCA is closing its Markounda base.

Ouham-Fafa Prefecture

- *The peace process is reaching the MPC.* In November 2025, the MPC signed an agreement in N'Djamena committing to end its activities in Ouham-Fafa, Kémo and Nana-Grébizi. Disarmament of MPC fighters resumed in mid-2026.
- *This is the country's largest concentration of displacement sites.* As of March 2026, Ouham-Fafa had 25 of the country's 77 sites: 10 in Batangafo, 8 in Bouca and 7 in Kabo. Many are small scattered sites along the Batangafo, Bouca and Ouandago roads, which aid agencies assessed in 2025.
- *Attacks still cause new displacement.* On 4 February 2026, unidentified armed men attacked Yima, 18 km east of Batangafo, displacing more than 100 people.
- *Health care depends heavily on MSF.* MSF runs Batangafo's 150-bed general hospital and supports five surrounding health centres. In 2018, that hospital doubled as the town's refuge.

Ouham-Pendé Prefecture

- *3R disarmament has begun but the group still causes the most harm.* 3R fighters were disarmed at Koui in July 2025 and again in March 2026, when 73 fighters handed in their weapons. Yet in March 2026, Ouham-Pendé (counted together with Lim-Pendé) recorded more human rights violations than any other prefecture, driven by 19 cases of 3R child recruitment. All the girls aged 14 to 16 who suffered conflict-related sexual violence by the 3R that month had also been recruited by the group in Ouham-Pendé. Many recruited children were identified only after disarmament operations.
- *Clashes and aid obstruction persist.* In January 2025, fighting between the 3R and local self-defence groups displaced residents of Ngoutéré and Bozoum. In February 2026, 3R members denied NGOs humanitarian access in Ouham-Pendé.
- *Farmer–herder violence is deadly.* On 31 January 2026, transhumance-related attacks at Kounang and Kowone, 43 km from Bocaranga, killed and injured civilians and caused heavy livestock losses. The Protection Cluster lists Ouham-Pendé as a main transhumance hotspot and among the prefectures still recording grave rights violations.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Sangha-Mbaéré Prefecture

- *Security is relatively stable.* Sangha-Mbaéré escaped the worst of CAR's armed conflict. UN police now patrol daily on the Berbérati–Nola road, linking it to the rest of the west.
- *Conservation is a major employer.* About 340 staff, including 140 rangers, work in the protected areas under joint management by the forestry ministry, WWF and a specialist conservation organisation. One group of habituated gorillas reopened to tourists in 2025, with two more being prepared.
- *Prisons and state services are failing.* In February 2026, UN monitors found that health care at Nola prison had stopped entirely. There was no water or electricity, sanitation was appalling, and the food allowance was just 67 CFA francs (about US$0.12) per prisoner per day. This reflects how thin state services are in this remote corner.

Vakaga Prefecture

Vakaga is now one of CAR's most acute crises, driven mostly by Sudan's war.

- *It hosts a large refugee population.* As of June 2026, the Korsi site in Birao held about 24,800 Sudanese refugees, roughly a quarter of the prefecture's own population. Vakaga was already one of CAR's poorest areas: 46% of people are food insecure, and 89% of households cannot afford a healthy diet. At Korsi, water and sanitation fall below emergency standards, with 52 people sharing each latrine.
- *Sudan's war is spilling across the border.* Fighters from Sudan's Rapid Support Forces (RSF) have made incursions into Vakaga, tried to set up checkpoints and recruited local youth. In February 2026, about 100 RSF members were positioned 400 metres from the border at Birao. On 15 February, RSF members attacked a civilian vehicle near Sikikédé, killing a pregnant woman and a four-year-old boy.
- *A major attack hit Am-Dafock.* On 30 June 2026, an armed group attacked the border town of Am-Dafock, killing civilians and members of the security forces and displacing about 17,000 people. Government forces retook the town. At least 16,000 displaced Central Africans gathered around the MINUSCA base there.
- *Abuses by state forces and militias add to the danger.* On 27 February 2026, soldiers opened fire on civilians at Ouanda-Djallé after an altercation, killing three and wounding ten, including children. Russian-linked personnel and Birao self-defence militias detained and beat three young men at Delembé. A self-defence group known as the "Wagner noirs", reportedly trained with Russian-linked support, killed a civilian at Am-Dafock. Operations against the FPRC armed group around Gounda reportedly left about nine fighters dead, and two of three captured fighters were later killed.
- *Community relations and aid access are fraying.* Tensions are rising between the Rounga and Goula communities. Vakaga recorded more incidents against aid workers than any other prefecture in January–July 2026. In August 2025, insecurity around Birao disrupted farming at the peak of the season, causing shortages and rising prices. On the positive side, the prefect has issued a directive banning child recruitment by self-defence groups.

PREFECTURES PROGRAMME · SECTION 4 OF 9

Priorities by Prefecture

Seven priority interventions for each prefecture

Bamingui-Bangoran Prefecture

1. **Security and justice.** This means trained gendarmes and police, a functioning court and prison, and protection for traders and aid workers on the roads, as the state takes over from MINUSCA.
2. **Reintegration and reconciliation.** Livelihoods for demobilised FPRC and Siriri fighters, and dialogue among Runga, Goula and Kara communities to prevent a repeat of 2020.
3. **Ending isolation.** Road links from Ndélé to Kaga-Bandoro, Bria and Birao, plus mobile coverage, so that markets, services and the state can reach people.
4. **Food security and livelihoods.** Support for farming and herding, peaceful transhumance management, and market access to bring down prices.
5. **Health and protection.** Strengthen Ndélé hospital and rural health posts, and keep sexual-violence and child-protection services running.
6. **Support for refugee-hosting communities.** Shared water, schools and clinics, so that Sudanese arrivals don't strain host families.
7. **Conservation-linked jobs.** Ranger, tourism and park-buffer livelihoods tied to the national park, for the longer term.

Bangui Prefecture

1. **Reliable electricity.** Spare parts and maintenance for Boali, more solar and thermal capacity, and backup power for water pumping and hospitals.
2. **Safe water and sanitation.** Expand the water network and standpipes into underserved districts and Bimbo and Bégoua, and build latrines and drainage. Cholera prevention depends on this.
3. **Flood protection and resettlement.** Drainage works, river defences, and planned relocation for households in permanently flooded areas.
4. **Jobs and livelihoods.** Work for a large young urban population, especially in the informal economy that collapses whenever power and fuel fail.
5. **Community policing and public safety.** Neighbourhood policing, street lighting, and youth programmes to curb crime.
6. **Health system resilience.** Epidemic preparedness for cholera, Ebola and measles, plus reliable water and power at health facilities.
7. **Fuel supply security.** Strategic fuel stocks and transparent import arrangements to stop recurrent shortages and price spikes.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Basse-Kotto Prefecture

1. **Reconciliation and justice.** Community dialogue between Christian and Muslim communities and between farmers and herders, plus accountability for the atrocities of 2017–2018. Trust between communities is the foundation for everything else.
2. **Reintegration of returnees and ex-fighters.** Shelter, land-dispute resolution and livelihoods for returning refugees, displaced people and demobilised UPC and anti-Balaka members.
3. **Rebuilding public services.** Rehabilitate schools, health centres and administrative buildings in Mobaye, Alindao and the smaller sub-prefecture towns, and get teachers and health workers back.
4. **Roads and river trade.** Repair the Alindao–Bambari, Alindao–Mobaye and Mobaye–Zangba roads, and invest in Mobaye's river port to reconnect farmers to markets.
5. **Agriculture and food security.** Seeds, tools, storage and processing support for a mainly farming population whose production was disrupted for years.
6. **Health.** Strengthen district hospitals and rural health posts, with disease surveillance given the cholera and Ebola threats along the Ubangi.
7. **Water and sanitation.** Boreholes and latrines in return areas.

Haute-Kotto Prefecture

1. **Protection and accountable security.** Disciplined national forces and police, monitoring of abuses by all armed actors including Russian-linked personnel, and safe roads for traders and aid.
2. **A fair deal from mining.** Formal, transparent artisanal-mining arrangements so that diamond wealth reaches local miners and communities rather than armed actors.
3. **Child protection and reintegration.** Care, family tracing and schooling for children escaping the LRA and other armed groups, plus prevention of recruitment.
4. **Durable solutions for displaced people.** Housing, land and services so that people who lived for years in PK3 and similar sites can resettle or return home.
5. **Ending isolation.** Repair roads linking Bria to Ippy, Ouadda and Yalinga so markets, health and the state can reach outlying areas.
6. **Health and sexual-violence services.** Strengthen Bria hospital and mobile clinics for scattered rural settlements.
7. **Food security and livelihoods.** Support farming and alternatives to mining, especially for young people.

Haut-Mbomou Prefecture

1. **Ending the AAKG–state conflict.** Negotiated dialogue, release of hostages and a disarmament path for the AAKG, plus accountability for abuses by all sides, including state forces.
2. **Protection of civilians.** Safe access to fields, markets and roads for all communities. Peuhl and Muslim residents are especially exposed.
3. **Emergency aid for displaced people.** Shelter, food, water and health care for about 30,000 people around Zémio, with safe access for aid convoys.
4. **Reconnecting the region.** Secure and rehabilitate the Bangassou–Zémio–Obo road, which is the lifeline for goods, services and the state.
5. **Health.** Support Obo's hospital as the sole referral facility, plus mobile clinics and sexual-violence care.
6. **Education and youth.** Reopen schools and get teachers back, and give young people alternatives to recruitment by the AAKG or the LRA.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

7. **Reconciliation.** Rebuild trust between Azande and Peuhl communities that has collapsed since 2023.

Kémo Prefecture

1. **Local security and conflict mediation.** This means farmer–herder dialogue committees, agreed transhumance corridors, and support for the state as it takes over from MINUSCA.
2. **Roads and market access.** All-season maintenance of the Sibut–Dékoa–Kaga-Bandoro axis and feeder roads, so produce reaches Sibut and Bangui.
3. **Agricultural recovery.** Seeds, tools, storage and small-scale cassava and groundnut processing to raise incomes and reduce food insecurity.
4. **Health beyond Sibut.** Extend the hospital's model to health posts in Dékoa, Mala and Ndjoukou, with a reliable drug supply chain.
5. **Education.** Rehabilitate schools damaged in 2013–15 and pay and retain teachers.
6. **Water and sanitation.** Rural boreholes, which are among the needs rising fastest nationally.
7. **Youth jobs and reintegration.** Work for young people and demobilised fighters, to reduce recruitment risk.

Lim-Pendé Prefecture

1. **Completing 3R disarmament.** Finish demobilisation and reintegrate ex-fighters, especially Fulani youth, into livelihoods, with monitoring to stop renewed abuses.
2. **Sexual-violence prevention and survivor care.** Medical, psychosocial and legal support for survivors, plus safety measures for women working in fields or fetching water.
3. **Farmer–herder peace.** Agreed transhumance corridors, mediation committees and compensation mechanisms for crop damage.
4. **Accountable security forces.** Discipline and oversight of the army and of Russian-linked personnel, and an end to illegal checkpoints and extortion.
5. **Agriculture and food security.** Seeds, tools and market access for a large farming population whose harvests are repeatedly disrupted.
6. **Health and education.** Restore rural health posts and schools across a densely populated area that has been neglected for decades.
7. **Cross-border cooperation.** Coordination with Chad and Cameroon on herder movements, refugees and armed-group mobility.

Lobaye Prefecture

1. **Cholera control and safe water.** Contain the outbreak, then invest in boreholes, water treatment and sanitation across Mbaïki and the rural sub-prefectures.
2. **Health care.** Strengthen Mbaïki's hospital and rural health posts, with maternal and child health a priority given high preventable mortality.
3. **Farm incomes.** Revive coffee and food-crop value chains through better inputs, processing, fair prices and roads to Bangui markets.
4. **Rights and livelihoods for the Aka.** Recognise customary land rights, share logging revenues and fund community forestry, so that indigenous communities benefit from rather than lose their forest.
5. **Sustainable forestry.** Enforce logging rules and curb illegal timber trafficking, keeping timber revenue in the prefecture.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

6. **Education and youth employment.** Expand schooling beyond primary level and create jobs in agro-processing and forestry for a young population.
7. **Reconciliation.** Create conditions for displaced Muslim residents to return safely to Mbaïki and Boda.

Mambéré Prefecture

1. **Fair and transparent mining.** Formalise artisanal diamond and gold mining through cooperatives, fair buying prices, traceability and local revenue-sharing, so mineral wealth benefits Carnot's miners rather than outside actors.
2. **Reconciliation and return.** Create conditions for displaced Muslim traders and herders to return safely to Carnot and Guen, rebuilding trade between communities.
3. **Health care.** Sustain Carnot hospital and extend services to Gadzi, Amada-Gaza and Senkpa-Mbaéré.
4. **Diversified livelihoods.** Agriculture, agro-processing and vocational training for young people, reducing dependence on volatile mining.
5. **Roads and connectivity.** Better links to Berbérati, Bouar and Bangui, plus mobile coverage outside the main towns.
6. **Education.** Schools and teachers, especially in mining areas where children are drawn into work early.
7. **Mine-site safety and environment.** Safer working conditions on mining sites and land restoration after alluvial digging.

Mambéré-Kadéï Prefecture

1. **Safe roads and markets.** Remove illegal checkpoints, end extortion, and secure the Sosso-Nakombo and Gamboula routes so traders and herders can move freely. This will matter more as MINUSCA's footprint shrinks.
2. **Farmer–herder agreements.** Mapped transhumance corridors, local mediation committees, and compensation for crop damage.
3. **Fair mining.** Formalise artisanal diamond and gold mining so miners get fair prices and local revenue stays in Berbérati.
4. **Reconciliation and returns.** Rebuild Christian–Muslim trust and support the return of displaced Muslim traders from Cameroon.
5. **Protection services.** Gender-based violence services, legal aid, and police who respond to abuses rather than commit them.
6. **Health and education.** Strengthen Berbérati's regional hospital as a referral centre for the west, and support rural schools.
7. **Cross-border cooperation.** Sustain the Cameroon–CAR security dialogue on armed groups, smuggling and herd movements.

Mbomou Prefecture

1. **Containing the AAKG conflict.** Dialogue, protection of civilians and accountable security forces, to stop the Haut-Mbomou crisis spreading further into Rafaï and Bakouma.
2. **Durable solutions for the displaced.** Return or local integration for Tokoyo's Muslims, still largely displaced since 2017, and for newly displaced Peuhl and others at Rafaï and Bakouma.
3. **Reconciliation in Bangassou.** Restore Tokoyo, its market and mosque, and rebuild cross-community trade, building on strong Catholic and community peace networks.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

4. **Health.** Sustain Bangassou's hospital and reinforce Rafaï's, with mobile clinics for displacement sites.
5. **Justice and detention.** A functioning, non-overcrowded prison, separation of children from adults, and an end to arbitrary detention.
6. **Roads and aid access.** Secure the Bangassou–Rafaï–Zémio and Bangassou–Bakouma routes for trade, services and humanitarian convoys.
7. **Livelihoods and food security.** Farming support and cross-river trade with DRC for a mostly rural population.

Nana-Grébizi Prefecture

1. **Completing MPC disarmament.** Reintegrate demobilised fighters with jobs and training, and prevent splinter factions from forming.
2. **Filling the security gap at Mbrès.** Ensure national forces and police maintain presence and patrols, with accountability, as MINUSCA leaves.
3. **Farmer–herder peace.** Agreed transhumance corridors, mediation committees and compensation for crop damage. Local roundtables on free movement and transhumance since 2019 offer a base to build on.
4. **Durable solutions for displaced people.** Help residents of the eight Kaga-Bandoro sites return home or settle locally, with land and housing support.
5. **Justice and rule of law.** A proper court and prison in Kaga-Bandoro, and an end to kidnappings for ransom.
6. **Agriculture and markets.** Inputs, storage and secure roads, so that farmers can benefit from Kaga-Bandoro's position on the main trade corridor.
7. **Health, education and water.** Restore services in rural areas around Mbrès and Nana-Outa, which were neglected during years of armed-group rule.

Nana-Mambéré Prefecture

1. **Completing 3R disarmament and reintegration.** Demobilise remaining fighters and give former combatants, many of them young herders, livestock and farming livelihoods, so the group does not reconstitute.
2. **Ending illegal taxation and abductions.** Remove armed checkpoints on livestock routes and rural roads, and guarantee that state-affiliated forces do not collude with armed groups.
3. **Farmer–herder coexistence.** This is the heart of the conflict here: agreed corridors, mediation, livestock markets and fair dispute resolution between Fulani herders and farming communities.
4. **Safe, fair mining.** Protect artisanal miners around Yidéré-Baboua and Zotoua, and bring mine revenues under transparent state oversight.
5. **Securing the Cameroon corridor.** Keep the Bouar–Baboua–Garoua-Boulaï road safe and well maintained, as a national lifeline and a local source of trade and jobs.
6. **Justice and accountability.** Build on progress in Bouar with courts that reach rural areas and accountability for abuses.
7. **Health, education and water.** Restore services in rural Abba, Baboua and Baoro, which were neglected during years of armed-group control.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Ombella-M'Poko Prefecture

1. **Ending kidnapping and armed incursions.** Secure the Boali–Bossembélé–Yaloké corridor and rural roads, and complete 3R disarmament so the group stops operating this close to the capital.
2. **Farmer–herder peace.** Mapped corridors, mediation committees and compensation, to break revenge cycles between Peuhl herders and farming and hunting communities.
3. **Access to justice.** Make Bossembélé's court and others functional and accessible, to replace mob justice and to protect people accused of witchcraft, mainly older women, widows and children.
4. **Protecting and modernising the Boali hydro plants.** Maintenance, spare parts and investment in new capacity, which also offers local jobs.
5. **Agriculture and market access.** Help farmers supply Bangui, the country's biggest market, which sits on their doorstep.
6. **Health, water and schools.** Basic services in rural areas such as Bogangolo and Damara, which are poorly served despite being close to the capital.
7. **Free movement.** Remove illegal checkpoints and stop extortion on the routes that feed Bangui.

Ouaka Prefecture

1. **Fair access to mining wealth.** Protect artisanal miners from armed violence, give them secure access to sites around Ndassima, and channel mining revenues into local development rather than outside actors.
2. **Accountable security forces.** Remove illegal checkpoints, end extortion, and disband or bring under control the militias working alongside Russian-linked personnel.
3. **UPC reintegration.** Livelihoods for demobilised UPC fighters, many from herder communities, plus support for the communities receiving them.
4. **Durable solutions for displaced people.** Return or local integration for residents of the 12 displacement sites, with land and housing help.
5. **Justice and detention.** Functioning courts, humane prisons and legal protection for people accused of witchcraft.
6. **Roads and trade.** Secure the Bambari–Ippy–Bria, Bambari–Alindao and Bambari–Grimari–Sibut routes that make Bambari a regional market.
7. **Health, education and water.**

Ouham Prefecture

1. **Completing disarmament.** Process the UPC and MPC fighters waiting at Kouki, bring the FDLP and remaining CPC elements into the peace process, and fund reintegration.
2. **Accountable security operations.** Stop the use of armed-group intermediaries, protect health centres and homes during operations, and end arrests that bypass the justice system.
3. **Farmer–herder peace.** Agreed corridors, mediation and compensation, especially along the Bossangoa–Chad road.
4. **Youth alternatives.** Build on Bossangoa's experience of young people resisting recruitment, with jobs, training and peace programmes.
5. **Safe border mining and trade.** Protect miners and traders around Markounda, and coordinate with Chad on cross-border armed groups.
6. **Health and education.** Rebuild looted health centres and support schools across the rural sub-prefectures.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

7. **Durable solutions for displaced people.** Help those displaced by CPC fighting and by recent operations to return home.

Ouham-Fafa Prefecture

1. **Durable solutions for displaced people.** Ouham-Fafa's most urgent and distinctive need: help residents of 25 sites, some displaced for a decade, return home or settle locally, with land, housing and livelihood support.
2. **Completing MPC disarmament.** Reintegrate fighters around Sido and Kabo, and fill the security gap they leave with accountable national forces.
3. **Protecting civilians in rural areas.** Patrols and early warning on the Batangafo, Bouca and Kabo roads to stop attacks like the one at Yima.
4. **Farmer–herder management.** Corridors, mediation and cooperation with Chad on herds entering through Sido and Kabo.
5. **Sustainable health care.** Secure the long-term future of Batangafo hospital and rural health centres beyond MSF, with the Ministry of Health and other partners.
6. **Food security and livelihoods.** Seeds, tools and market access so displaced and returning families can farm again.
7. **Education and youth.** Schools in displacement sites and return areas, plus alternatives to armed-group recruitment.

Ouham-Pendé Prefecture

1. **Rescuing and reintegrating child soldiers.** Release all children held by the 3R, then provide family reunification, psychosocial care, schooling and protection against re-recruitment. This is the most urgent need specific to Ouham-Pendé.
2. **Completing 3R disarmament.** Demobilise remaining fighters around Koui and Bocaranga, with livelihoods so they do not return to arms.
3. **Care for survivors of sexual violence.** Medical, psychosocial and legal support, especially for adolescent girls.
4. **Farmer–herder peace.** Corridors, mediation and compensation for crop and livestock losses, to stop revenge cycles.
5. **Humanitarian access.** Guaranteed safe access for aid agencies, which have repeatedly been looted or blocked here.
6. **Fair mining around Bozoum.** Local benefit, safe working conditions and environmental safeguards from gold mining.
7. **Rebuilding services.** Health centres, schools and markets in Bocaranga, Koui and Ngoutéré, damaged by repeated cycles of violence.

Sangha-Mbaéré Prefecture

1. **Rights and livelihoods for the BaAka.** Secure land and forest-use rights, a fair share of tourism and logging revenue, and access to health and education adapted to forest communities.
2. **Sustainable forestry and wildlife protection.** Enforce logging management plans and anti-poaching laws, with legal livelihoods for newcomers who might otherwise turn to poaching.
3. **Growing ecotourism.** Expand gorilla and elephant tourism around Bayanga as a source of jobs and revenue that stays in the prefecture. This is one of the few genuine growth opportunities in western CAR.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

4. **Fair diamond mining around Nola.** Cooperatives, traceability and fair prices for artisanal miners.
5. **Basic state services.** Functioning health centres, schools, water and humane detention conditions in Nola and the rural areas.
6. **Roads and cross-border trade.** Better links from Nola to Berbérati and to Cameroon and Congo, for markets and supplies.
7. **Health in remote forest areas.** Mobile clinics and vaccination for scattered forest communities.

Vakaga Prefecture

1. **Border security and civilian protection.** Disciplined national forces on the Sudan border, an end to RSF incursions and recruitment, and accountability for abuses by state forces and militias.
2. **Emergency aid for refugees and host communities.** Food, water, sanitation and shelter at Korsi and for host communities, so local residents do not lose out to refugees.
3. **Response for the 17,000 displaced from Am-Dafock.** Shelter, protection and a path home.
4. **Food security.** Safe access to fields at planting and harvest, seed support, and pre-positioned stocks before the rainy season isolates the prefecture.
5. **Social cohesion.** Rounga–Goula dialogue, and bringing self-defence groups under control, while enforcing the ban on recruiting children.
6. **Year-round access.** All-season roads or airstrip capacity so Vakaga is not cut off for six months a year.
7. **Health and education.** Services in Birao and Ouanda-Djallé, which are strained by refugees and insecurity.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

PREFECTURES PROGRAMME · SECTION 5 OF 9

Background Profile

Bangui Prefecture

Profile

Bangui is the capital and principal administrative, commercial and service centre of the Central African Republic. Situated on the Ubangi River, opposite the Democratic Republic of the Congo, it occupies a strategically important position for domestic commerce, cross-border trade and the delivery of public services.

The city concentrates government institutions, diplomatic missions, international organisations, healthcare providers, educational establishments, markets and major commercial activities. It also serves as a principal entry point for imported goods, humanitarian assistance and development resources.

For the Bangui Declaration, this concentration creates an opportunity to coordinate projects and demonstrate visible improvements in service delivery. However, the administrative boundary of Bangui must be distinguished from neighbouring Ombella-M'Poko Prefecture when identifying beneficiaries, infrastructure and project locations.

Population and demographic evidence

The Central African Republic's national statistics institute, ICASEES, published preliminary results from the fourth General Population and Housing Census (RGPH-4) in 2026. These provisional results report a national population of 6,656,269 for 2025, with a national density of approximately 10.7 people per square kilometre. The institute explicitly identifies the figures as preliminary and not yet validated. A verified Bangui-specific population and density figure should be extracted from the detailed census tables before the prefecture report is finalised.

Bangui's population is concentrated in urban neighbourhoods, making service coverage, congestion, drainage, housing, water supply and access to public facilities important planning considerations. Population density should be calculated using the confirmed administrative boundary and corresponding census population rather than an estimate for the wider urban area.

Economic and social profile

Bangui's economy is driven by public administration, trade, transport, construction, services and informal economic activity. Its markets connect urban consumers with agricultural producers and trading networks from other parts of CAR and neighbouring countries.

The city's principal development opportunities include:

- Strengthening small and medium-sized enterprises and informal businesses.
- Improving agricultural supply chains and urban food distribution.
- Developing practical vocational skills for young people.
- Improving the reliability of electricity, water and transport infrastructure.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

- Expanding access to healthcare and education.
- Creating employment through infrastructure rehabilitation and maintenance.

These opportunities are constrained by poverty, limited household purchasing power, unreliable infrastructure, shortages of skilled workers and the limited capacity of public institutions to finance and maintain essential services.

The World Bank's current CAR country overview identifies electricity access, agribusiness, education, health services and transport connectivity among the country's key development priorities. It also highlights the importance of investment that supports employment and broader participation in economic growth.

Key development challenges

Bangui's principal challenges include unequal access to reliable basic services, pressure on urban infrastructure, limited employment opportunities for young people, vulnerability to food-price increases and exposure to flooding and other climate-related shocks.

These issues are interconnected. For example, a school may have adequate classroom space but still face poor attendance if children lack meals or safe water. A health centre may have trained staff but struggle to provide continuous care because of medicine shortages or unreliable electricity.

> **Development implication:** Bangui should be approached through an integrated service-delivery model that combines rehabilitation of existing assets, targeted investment, local capacity-building and measurable improvements in the daily lives of residents.

3. Primary Healthcare

3.1 Current situation

Primary healthcare is a priority because the effective delivery of services depends on the availability of trained staff, essential medicines, diagnostic equipment, electricity, clean water and functioning referral systems.

WHO's public-health situation analysis published in December 2025 reported that CAR continued to face significant health-system constraints. Its HeRAMS monitoring programme had assessed more than 1,000 health service delivery units nationally, with substantial gaps in operational capacity. The December 2025 electricity-access assessment further provides a basis for identifying facilities that lack reliable power. These national findings establish the wider context but do not independently establish the current status of individual Bangui clinics.

UNICEF's 2025 annual report, published in 2026, documents national interventions in maternal and child health, vaccination, nutrition and community healthcare. Its results offer potential programme models for assessment in Bangui, subject to verification of local coverage and existing services.

3.2 Priority needs and interventions

Essential medicines and basic services

Assess public and community health facilities for stockouts of essential medicines, diagnostic supplies, maternal and child health products, and emergency medicines. Identify whether supply interruptions result from procurement, funding, storage or distribution problems.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Maternal and newborn healthcare

Review antenatal services, assisted births, emergency obstetric referrals, postnatal care and access to trained midwives. Identify facilities where improved equipment, staffing or reliable electricity could strengthen services.

Vaccination and child nutrition

Identify gaps in routine immunisation, outreach services, growth monitoring and the screening and treatment of child malnutrition. Strengthen referral arrangements between community health workers and health facilities.

Electricity and facility readiness

Assess power interruptions, refrigeration requirements, lighting, water availability and essential equipment. Solar installations should be considered alongside maintenance, battery replacement and staff training.

3.3 Existing initiatives and opportunities

WHO's HeRAMS database is a relevant starting point for facility-level assessment. UNICEF's national health programmes provide additional evidence of vaccination, community healthcare and nutrition interventions.

The first task should be to extract the available Bangui-specific information from these sources and compare it with records from the Ministry of Health and individual facilities. Existing projects should be mapped before new interventions are proposed.

3.4 Recommended actions

- Create a verified inventory of health facilities, their locations, services and operational status.
- Identify priority facilities with medicine shortages or gaps in maternal and child healthcare.
- Review vaccination coverage and child nutrition services by neighbourhood where data permit.
- Assess electricity, refrigeration, water and sanitation requirements.
- Identify interventions that could restore existing services quickly.
- Establish measurable targets and clear responsibility for ongoing maintenance and supply.

Proposed indicators: facilities assessed; availability of essential medicines; facilities with reliable electricity and water; assisted births; vaccination coverage; children screened and treated for malnutrition; and functionality of community health worker networks.

4. Schools and Young People

4.1 Current situation

Education is central to long-term economic development and social stability. CAR continues to face constraints involving teacher availability, classroom conditions, educational materials, school access and the transition from education into employment.

UNICEF's 2025 annual report documents classroom construction and rehabilitation, teacher training, school access initiatives and support for vulnerable children across CAR. These are relevant examples of existing approaches, but the national totals must not be treated as achievements in Bangui unless the corresponding locations are confirmed.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

4.2 Priority needs and interventions

Classroom rehabilitation and supplies

Survey schools for structural repairs, usable classroom capacity, desks, textbooks, blackboards, sanitation and access to safe drinking water. Prioritise repairs that can return unusable classroom space to service.

Teacher availability and learning quality

Record teacher numbers, qualifications, attendance and pupil-to-teacher ratios. Work with education authorities to identify schools with serious staffing gaps and opportunities for teacher development.

School meals and attendance

Map existing school-feeding programmes and identify schools where meal provision could improve attendance and nutrition. Assess the feasibility of purchasing food from local farmers and suppliers.

Vocational training and youth employment

Develop practical training pathways in construction, agriculture, electrical installation, solar maintenance, mechanics, plumbing, water systems and digital services. Link courses to employers, apprenticeships and identifiable local demand.

4.3 Existing initiatives and opportunities

UNICEF's 2025 programme reporting describes support for classrooms, teacher training, school materials and access to education. The organisation's wider approach also recognises the value of connecting education with child protection, nutrition, health and water services.

For Bangui, the research should establish which schools already benefit from government or partner programmes, what commitments remain outstanding and where additional interventions would fill a genuine gap.

4.4 Recommended actions

- Compile a school register with location, enrolment, classroom capacity and teacher numbers.
- Identify urgent repairs and equipment shortages.
- Explore a coordinated collection and distribution programme for usable second-hand books.
- Map school-meal coverage and potential local suppliers.
- Identify vocational training providers and employers willing to support practical courses.
- Prioritise training that leads to recognised skills, apprenticeships or employment.

Proposed indicators: classrooms repaired and returned to use; desks and books delivered; teacher attendance; schools receiving meals; young people completing vocational training; and graduates entering apprenticeships or employment.

5. Food and Farmers

5.1 Current situation

Bangui is the country's main urban consumption and distribution centre. Its food supply depends on agricultural production, rural transport, wholesale markets, storage, processing and retail networks.

Food security is affected not only by production but also by household purchasing power. FEWS NET's February 2026 food-security outlook identified urban poor households, including vulnerable households in Bangui, among those exposed to food-access constraints because of their reliance on market purchases.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

The opportunity for the Bangui Declaration is to improve connections between producers, food businesses, local markets and institutional buyers while supporting more resilient livelihoods.

5.2 Priority needs and interventions

Agricultural inputs and farmer support

Identify farmer cooperatives, peri-urban producers and supply areas serving Bangui. Assess access to improved seeds, tools, agricultural advice and seasonal inputs, ensuring distribution takes place before the relevant planting periods.

Market access and distribution

Map supply routes and identify bottlenecks affecting transport costs, delivery times and losses. Coordinate with the separate road-infrastructure research to identify which feeder-road improvements could benefit food supply.

Storage and small-scale processing

Assess demand for storage, drying, milling, packaging and processing facilities for cassava, maize, rice, vegetables and livestock products. Prioritise commercially viable operations with clear ownership and maintenance arrangements.

Local procurement and food enterprises

Explore transparent supply agreements between farmer groups and schools or other institutional buyers. Assess the capacity of women-led businesses, cooperatives and small processors to supply consistent volumes at agreed quality and prices.

5.3 Existing initiatives and opportunities

The World Bank's current CAR portfolio includes the Emergency Food Crisis Response Project (PRUCAC), which supports agricultural production, vulnerable households and employment through labour-intensive public works. The Agricultural Recovery and Agribusiness Development Support Project (PRADAC) has also focused on smallholder productivity and agribusiness development. These national programmes are relevant to the research, but their current geographical coverage and eligibility rules should be checked before proposing a Bangui-specific activity.

WFP's agricultural-market and resilience programmes are also relevant sources for identifying farmer organisations, existing market linkages and potential school-feeding supply arrangements.

5.4 Recommended actions

- Map farmers, cooperatives, food processors, traders and potential institutional buyers.
- Identify barriers to transporting produce into Bangui's principal markets.
- Assess demand for appropriate storage and processing equipment.
- Investigate opportunities for school-feeding procurement from local producers.
- Develop pilot supply agreements with transparent pricing, quality requirements and payment terms.
- Identify agricultural businesses that could expand employment, especially for women and young people.

Proposed indicators: farmers receiving timely inputs; farmer groups connected to buyers; storage and processing capacity operational; post-harvest losses; local procurement value; and jobs created or sustained.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

6. Electricity and Water

6.1 Current situation

Electricity and water are essential to the effective functioning of schools, healthcare facilities, markets, small businesses and households.

UNICEF's current country information reports that only 36% of CAR's population has access to basic water services and 14% to basic sanitation services. It also identifies ageing urban water networks, inadequate maintenance and climate-related pressures as major challenges. These are national indicators, not measured coverage rates for Bangui alone.

Bangui has benefited from investments in electricity generation and water infrastructure, but the operational condition of individual facilities and the reliability of services need to be verified.

6.2 Electricity: existing infrastructure and opportunities

The Danzi solar project is an important reference point for the development of renewable electricity near Bangui. World Bank reporting describes investment in solar generation, battery storage and electricity distribution improvements intended to strengthen supply.

The wider electricity-sector programme also provides a basis for examining the needs of public facilities and potential renewable-energy applications. However, the current operational status, coverage and remaining commitments of individual installations should be confirmed before they are classified as completed or available for expansion.

6.3 Water: existing infrastructure and opportunities

UNICEF documented a water connection installed by the national water utility, SODECA, in Bangui's Castors neighbourhood in 2023, in an article published in May 2025. The example demonstrates the value of neighbourhood-level water improvements but does not establish citywide coverage.

The next research stage should identify existing water points, connections, boreholes, distribution systems and facilities requiring repair. Particular attention should be given to schools and health centres where inadequate water supply affects essential services.

6.4 Priority needs and interventions

Solar power for essential facilities

Assess clinics, schools, markets and public buildings with unreliable electricity. Prioritise systems with clearly defined maintenance responsibilities, local technical support and sustainable operating costs.

Rehabilitation of water infrastructure

Inspect water points, pipes, pumps and storage systems. Prioritise repairable assets that can restore service to significant numbers of households and public institutions.

Solar-powered water systems

Evaluate suitable locations based on water availability, quality, demand, pumping requirements and lifecycle costs. Solar pumping should be considered only where the water source and maintenance arrangements are sustainable.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Drainage and climate resilience

Identify neighbourhoods where flooding, blocked drains and erosion repeatedly disrupt access to homes, schools, clinics and markets. Coordinate with the team's infrastructure research to avoid duplicated assessments.

6.5 Recommended actions

- Compile a register of schools, clinics and markets, recording electricity and water availability.
- Verify the operational status of existing solar installations and water infrastructure.
- Identify repair opportunities before proposing new installations.
- Assess the feasibility of solar power for facilities with critical service needs.
- Establish maintenance responsibilities, repair procedures and replacement plans.
- Coordinate with SODECA, ENERCA, relevant public authorities and existing development partners.

Proposed indicators: facilities with reliable electricity and water; water points restored; solar installations operational; service interruptions; maintenance arrangements in place; and people benefiting from improved services.

7. Cross-Sector Opportunities

The five research areas are closely connected. Bangui Declaration interventions should therefore consider integrated projects that produce benefits across several sectors.

Proposed initiative	Potential components	Intended benefit
Healthy and Resilient Clinics	Essential medicines, maternal and child healthcare, solar power, water and sanitation.	More reliable primary healthcare.
Better-Equipped Schools	Classroom repairs, desks, textbooks, safe water and school meals.	Improved learning conditions and attendance.
Youth Skills and Employment	Training in construction, agriculture, solar maintenance, mechanics and plumbing.	Practical skills linked to local employment needs.
Local Food-to-School Supply Chains	Farmer cooperatives, food storage, processing and school procurement.	Stronger local markets and agricultural livelihoods.
Reliable Water and Energy for Markets	Water-system rehabilitation, electricity improvements and maintenance arrangements.	Better operating conditions for small businesses.
Climate-Resilient Neighbourhoods	Drainage repairs, water infrastructure and labour-intensive public works.	Reduced disruption and temporary employment.

> **Note:** These are preliminary intervention concepts. They should not be presented as approved, financed or existing projects until the relevant evidence has been obtained.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

8. Initial Project and Initiative Register

The following register identifies relevant programmes and initiatives for further investigation. Their inclusion does not mean that they are all operating within Bangui Prefecture or that outstanding commitments have been confirmed.

Programme or initiative	Relevance to the research	Next verification step
WHO HeRAMS	Health-facility status and availability of essential services.	Extract Bangui-specific facility data and check the latest operational status.
UNICEF health and nutrition programmes	Maternal and child health, vaccination and nutrition.	Identify current Bangui partners, facilities and coverage.
UNICEF education programmes	School access, classroom improvements and teacher support.	Confirm beneficiary schools and outstanding needs.
World Bank PRUCAC	Agricultural production, food security and employment.	Confirm current implementation areas and eligible activities.
World Bank PRADAC	Smallholder agriculture and agribusiness.	Identify relevant local beneficiaries and business opportunities.
Danzi solar and electricity-sector programmes	Electricity generation and access.	Confirm current system performance, service coverage and remaining commitments.
UNICEF/SODECA water initiatives	Urban water access and neighbourhood connections.	Map installed infrastructure, current functionality and repair requirements.

For every initiative, the detailed report should establish the implementing organisation, location, funding source where available, current progress, outstanding work and the next action required.

9. Recommended Priorities for Bangui

It is recommended that the following sequence for turning the research into a practical development programme.

- **Establish a verified baseline.** Compile facility and service registers for healthcare, education, water and electricity, supported by available agricultural and market information.
- **Identify immediate service gaps.** Prioritise problems such as essential medicine shortages, unusable classrooms, non-functional water points and unreliable power at critical facilities.
- **Review existing commitments.** Establish which projects are completed, operational, delayed or still at the planning stage, working with the relevant implementing organisations.
- **Select feasible pilot interventions.** Identify a manageable number of facilities or communities where improvements can be delivered, maintained and measured.
- **Build local partnerships.** Coordinate with government authorities, development agencies, local organisations, technical providers, farmer groups and businesses.
- **Measure and report results.** Record completion, functionality, service improvements, beneficiaries reached and employment created, using evidence that can be independently checked.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

10. Outstanding Research Requirements

Before this report can become a fully quantified implementation plan, the following information should be collected.

Information required	Primary verification route
Population, density and administrative boundaries	ICASEES, including detailed provisional RGPH-4 results.
Healthcare facilities, staffing and service availability	Ministry of Health, WHO HeRAMS and facility records.
Schools, enrolment, classroom conditions and teachers	Ministry of Education, UNICEF and school-level records.
Agricultural producers, cooperatives and supply chains	Ministry of Agriculture, WFP, farmer organisations and market operators.
Water points, network condition and service interruptions	SODECA, relevant public authorities and site inspections.
Electricity coverage and solar-system functionality	ENERCA, energy-sector project teams and facility inspections.
Existing projects, financing and outstanding commitments	Government project units, development partners and implementing agencies.

All project records should include the location, responsible organisation, current status, evidence date, outstanding work, barriers, proposed next action and measurable outcome.

Where reliable information is not available, the report should explicitly record the gap and identify how it could be resolved.

11. Conclusion

Bangui is an appropriate starting point for the Bangui Declaration's prefecture-level research. Its concentration of institutions, markets and essential services creates opportunities to coordinate improvements and demonstrate tangible development results.

The principal task is to move from a broad understanding of needs to a verified, prioritised list of interventions. This requires mapping existing facilities, reviewing current programmes, identifying outstanding commitments and determining which actions can realistically be completed and maintained.

The strongest approach is to build on existing assets, coordinate with established partners and focus on measurable outcomes rather than simply proposing new infrastructure.

The intended result is a practical development baseline for Bangui that helps the Bangui Declaration identify where action is needed, which partners should be involved and how progress can be demonstrated.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

PREFECTURES PROGRAMME · SECTION 6 OF 9

Programme Implementation

Prefecture Implementation

Executive summary

The Bangui Declaration should phase its prefecture-by-prefecture delivery by security conditions. Start full development packages in Bangui and six stabilised prefectures. The work in nine prefectures to disarmament and reintegration. In the four eastern prefectures still in active conflict, deliver only protection-sensitive basic services alongside humanitarian partners.

This briefing draws on two pieces of research covering all 20 prefectures. The first is a current-conditions assessment based on UN, MINUSCA, Protection Cluster and NGO reporting up to September 2026. The second is an implementation plan that sets seven priorities for each prefecture. Both are measured against the Declaration's delivery pillars: health, schools and youth, roads, food and farmers, electricity and water, and investment.

Headline findings

- **Insecurity is the binding constraint.** Security, justice or accountable armed forces appear among the priorities of 17 of 20 prefectures. In several prefectures, abuses by state forces and Russian-linked personnel are reported alongside abuses by armed groups.
- **Farmer–herder conflict is the most widespread driver of violence.** The country recorded 601 transhumance-related incidents in the first half of 2026. Managing transhumance is a priority in 11 prefectures, concentrated in the north-west and centre.
- **Disarmament is advancing but unfinished.** The 3R, UPC, MPC and FPRC are all at various stages of demobilisation. Livelihoods for former fighters are a priority in 12 prefectures and are a direct entry point for the Declaration.
- **Health and education are universal needs.** Health appears in all 20 priority lists, and education or youth jobs in 19. Cholera is active in Lobaye and around Bangui, with 197 confirmed cases and 24 deaths declared in June 2026.
- **Humanitarian funding is shrinking.** The 2026 humanitarian plan seeks about US$264 million for 1.3 million people and is badly underfunded. Agencies are pulling back from stabilised areas, leaving a gap that a development programme can fill.
- **MINUSCA is handing security to the state.** Bases at Bamingui, Pombolo, Dékoa, Mbaïki, Dilapoko, Ippy and Kouango were handed over in June 2026, and Mbrès and Markounda are closing. These transitions create both an opening for state-led delivery and a risk of worse civilian protection.
- **Mining wealth is largely captured by outside armed actors.** Russian-linked forces control major sites in Haute-Kotto, Lobaye, Ouaka and Mambéré. Formalising artisanal mining could pay off, but it carries serious due-diligence and reputational risk.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

- **The Declaration's pillars cover services, not security.** Its pillars match most service priorities, but not security, justice, disarmament or protection, which head the lists in most prefectures. Delivering here depends on partners who work on those areas.

Where effort should be focused first

1. **Quick, visible delivery in stabilised areas.** Basse-Kotto, Kémo, Lobaye, Mambéré, Mambéré-Kadéï and Sangha-Mbaéré have no major active armed group and are losing humanitarian attention. Health, water, roads and farm support can start now.
2. **Bangui's power, water and flood systems.** One Boali breakdown in January 2026 left the capital without power or tap water for more than a week. Backup power for pumping and hospitals, plus drainage, would benefit the largest concentration of people.
3. **Livelihoods for reintegration in disarmament prefectures.** In Ouham-Pendé, Lim-Pendé, Nana-Mambéré, Ouham, Ouham-Fafa, Nana-Grébizi, Ouaka, Ombella-M'Poko and Bamingui-Bangoran, roads, farming and youth programmes can be designed so that they also stop former fighters from rearming.

Context and approach

The Central African Republic is emerging from more than a decade of armed conflict into a fragile, uneven peace. Fighting slowed in 2025 for the first time in years, and national elections were held in December 2025. Even so, about 2.4 million people (38% of the population) needed humanitarian aid in 2025. Roughly one in three people is acutely food insecure, and about 428,000 remain internally displaced.

The country has 20 prefectures, including the capital, Bangui. The Declaration describes its approach as delivery "prefecture by prefecture", so this briefing keeps that structure throughout.

How the research was used

- **Current conditions.** For each prefecture, the assessment covers security, displacement, services, livelihoods and governance. It draws on MINUSCA, the UN Protection Cluster (July 2026 analysis), UNHCR, WFP, WHO, MSF and UN human rights monitoring, and covers events up to September 2026.
- **Implementation plan.** For each prefecture, the plan sets seven priority interventions in rough order of importance.
- **Synthesis.** Each prefecture's priorities were coded against 15 recurring themes to identify common patterns. Each prefecture was also given one of four delivery categories based on its security situation, set out below.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Delivery categories used in this briefing

Category	What it means for delivery	Prefectures
A. Urban systems	Politically stable; needs are infrastructure and urban services at scale	Bangui
B. Recovery and growth	No major active armed group; MINUSCA has withdrawn or was never central; ready for development programming	Basse-Kotto, Kémo, Lobaye, Mambéré, Mambéré-Kadéï, Sangha-Mbaéré
C. Stabilisation and reintegration	Disarmament under way but residual armed-group violence, farmer–herder clashes or abuses persist; programming must be conflict-sensitive and linked to disarmament	Bamingui-Bangoran, Lim-Pendé, Nana-Grébizi, Nana-Mambéré, Ombella-M'Poko, Ouaka, Ouham, Ouham-Fafa, Ouham-Pendé
D. Active conflict and emergency	Ongoing fighting, cross-border spillover or mass displacement; aid access is restricted	Haute-Kotto, Haut-Mbomou, Mbomou, Vakaga

These categories are a judgement made from the research and are intended to guide sequencing. They should be revisited each quarter, because conditions in CAR change quickly.

All 20 prefectures at a glance

Seven prefectures (category A or B) are ready for development delivery now. Nine (C) need packages built around disarmament and farmer–herder peace. Four (D) need emergency and protection-led approaches first. Within each category, prefectures are listed alphabetically.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Prefecture	Category	Defining challenge	Top priority in the plan	Best Declaration entry point
Bangui	A. Urban systems	Power and water failures; flooding; rising crime	Reliable electricity	Electricity and water
Basse-Kotto	B. Recovery	Looted public buildings; returnees need land and homes	Reconciliation and justice	Rebuild schools and clinics; roads and river port
Kémo	B. Recovery	Farmer–herder tension; roads cut in rainy season	Local security and mediation	Sibut–Dékoa road; extend Sibut hospital model
Lobaye	B. Recovery	Cholera; deep rural poverty; Aka dispossession	Cholera control and safe water	Water and health; coffee value chain
Mambéré	B. Recovery	Mining controlled by outside armed actors	Fair, transparent mining	Health and skills in mining areas
Mambéré-Kadéï	B. Recovery	Illegal checkpoints and extortion on roads	Safe roads and markets	Berbérati hospital; market roads
Sangha-Mbaéré	B. Recovery	Failing state services in a remote forest area	BaAka rights and livelihoods	Ecotourism and conservation jobs
Bamingui-Bangoran	C. Stabilisation	Volatile security; isolation; Sudan spillover	Security and justice	Ndélé road links; shared services with refugees
Lim-Pendé	C. Stabilisation	3R sexual violence; farmer–herder clashes	Completing 3R disarmament	Farm inputs and rural health posts
Nana-Grébizi	C. Stabilisation	Kidnapping; MINUSCA leaving Mbrès	Completing MPC disarmament	Agriculture on the Kaga-Bandoro corridor
Nana-Mambéré	C. Stabilisation	Residual 3R taxation and abductions	3R disarmament and reintegration	Bouar–Garoua-Boulaï corridor; herder livelihoods
Ombella-M'Poko	C. Stabilisation	3R kidnapping and farmer–herder violence near the capital	Ending kidnapping and incursions	Boali power; farm supply to Bangui
Ouaka	C. Stabilisation	Mining violence; abusive checkpoints; 12 displacement sites	Fair access to mining wealth	Bambari trade roads; UPC reintegration
Ouham	C. Stabilisation	Residual rebels and abusive security operations	Completing disarmament	Youth jobs; rebuilding looted clinics
Ouham-Fafa	C. Stabilisation	25 displacement sites, the most in the country	Durable solutions for the displaced	Seeds and tools for returnees; sustaining Batangafo hospital
Ouham-Pendé	C. Stabilisation	3R child recruitment	Rescuing and reintegrating child soldiers	Schools and clinics in Bocaranga, Koui and Ngoutéré
Haute-Kotto	D. Active conflict	Russian-controlled mining; LRA; child abuses	Protection and accountable security	Bria hospital; mobile clinics
Haut-Mbomou	D. Active conflict	CAR's most violent prefecture (AAKG fighting)	Ending the AAKG–state conflict	Obo hospital; reopening schools
Mbomou	D. Active conflict	AAKG spillover; nine displacement sites	Containing the AAKG conflict	Bangassou and Rafaï hospitals
Vakaga	D. Active conflict	Sudan war spillover; 24,800 refugees at Korsi	Border security and protection	Food, water and access for host communities

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Prefecture profiles

Each profile gives the prefecture's delivery category, its current situation, the seven priority interventions from the implementation plan (in priority order), and where the Declaration could have the most impact. Prefectures are listed alphabetically.

Category A: Urban systems

Bangui

Current situation

- The city is politically stable after the December 2025 elections, but crime is rising. About 94,000 internally displaced people live in the prefecture, and nearly 40% of residents are poor.
- Power and water are fragile. In January 2026 a Boali breakdown cut both for more than a week, and replacement parts take at least six months. National generation is about 100 MW against demand of about 250 MW.
- Fuel shortages recurred in April and November 2025 and July 2026, raising fares and living costs.
- Flooding is worsening. Around 5,000 people in Kolongo and M'poko Bac have lived in standing water since July 2023. Cholera (declared June 2026 in Bimbo) and Ebola in neighbouring DRC are active threats.

Priority interventions

1. Reliable electricity: Boali spare parts, solar and thermal capacity, and backup for pumping and hospitals
2. Water and sanitation in underserved districts and in Bimbo and Bégoua
3. Flood drainage, river defences and planned resettlement
4. Jobs for young people in the informal economy
5. Community policing, street lighting and youth programmes
6. Epidemic preparedness for cholera, Ebola and measles
7. Strategic fuel stocks and transparent fuel imports

> **Opportunity for impact:** Backup solar power for water pumping and hospitals is the single intervention with the widest reach in the country. It addresses power, water and cholera risk at once.

Category B: Recovery and growth

Basse-Kotto

Current situation

- Security has largely been restored. The UPC signed a ceasefire in April 2025 and is demobilising, and MINUSCA handed over its Pombolo base in June 2026.
- Refugees have been returning to Alindao since 2025 and need housing, land and livelihoods.
- Schools, health centres and administrative buildings were looted or wrecked, and residents are alarmed by the state of Mobaye's public buildings.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

- The economy rests on subsistence farming and river trade through Mobaye's port. As a stabilised area, it is likely to lose humanitarian funding.

Priority interventions

1. Reconciliation and accountability for the 2017–2018 atrocities
2. Shelter, land-dispute resolution and livelihoods for returnees and former fighters
3. Rehabilitating schools, health centres and offices in Mobaye, Alindao and smaller towns
4. Alindao–Bambari, Alindao–Mobaye and Mobaye–Zangba roads, and Mobaye river port
5. Seeds, tools, storage and processing
6. District hospitals and disease surveillance along the Ubangi
7. Boreholes and latrines in return areas

> **Opportunity for impact:** This is a strong candidate for an early flagship. Its needs are rebuilding and reconnection, which map directly onto the Declaration's pillars, and humanitarian agencies are pulling back.

Kémo

Current situation

- Security is improving but fragile. MINUSCA handed its Dékoa base to the government in June 2026, so security now rests with national forces.
- Farmer–herder tension is the main live threat. Violence east of Sibut in January 2025 displaced residents, and a Peuhl herder was killed near Galafondo.
- Health has a bright spot: with World Bank support, Sibut hospital has a new maternity unit. Medicines are still trucked from Bangui, and rural areas are far less well served.
- Cassava, groundnuts and sesame anchor incomes around the Sibut market. Rainy-season flooding cuts farms off from markets.

Priority interventions

1. Farmer–herder dialogue committees and agreed transhumance corridors
2. All-season maintenance of the Sibut–Dékoa–Kaga-Bandoro axis and feeder roads
3. Seeds, tools, storage and cassava and groundnut processing
4. Extending Sibut's hospital model to Dékoa, Mala and Ndjoukou, with a reliable drug supply
5. Rehabilitating schools damaged in 2013–15, and paying and keeping teachers
6. Rural boreholes
7. Jobs for young people and former fighters

> **Opportunity for impact:** Kémo is close to Bangui and has a proven health model to replicate. Roads plus agro-processing could show quick, measurable gains.

Lobaye

Current situation

- Security is stable. MINUSCA handed over its Mbaïki base in June 2026.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

- Rural poverty is the core problem. Most people are poor coffee farmers, few children reach secondary school, and many die for lack of medical care.
- CAR's fifth-ever cholera outbreak was declared in June 2026 in the Mbaïki and Bimbo health districts, with 197 confirmed cases and 24 deaths.
- Logging is displacing Aka forest communities without compensation, and Wagner has extended its control over mining sites at Boda.

Priority interventions

1. Containing cholera, then boreholes, water treatment and sanitation
2. Mbaïki hospital and rural health posts, focused on mothers and children
3. Reviving coffee and food-crop value chains, with roads to Bangui markets
4. Recognising Aka customary land rights and sharing logging revenues
5. Enforcing logging rules and curbing illegal timber trafficking
6. Secondary schooling and jobs in agro-processing and forestry
7. Safe return of displaced Muslim residents to Mbaïki and Boda

> **Opportunity for impact:** Water and sanitation here deliver an immediate public-health return, and the coffee value chain is a ready-made growth opportunity next to Bangui's market.

Mambéré

Current situation

- The prefecture is relatively calm and features little in recent conflict reporting.
- Mining is controlled by outside armed actors. Across CAR, control passed from Wagner to the Russian defence ministry's Africa Corps after 2023, and production is neither monitored nor regulated.
- Artisanal miners remain poor. The lifting of the Kimberley Process embargo in 2024 has not yet improved incomes or governance.
- The Muslim community has never fully returned, which has hollowed out trading and livestock networks.

Priority interventions

1. Mining cooperatives, fair buying prices, traceability and local revenue-sharing
2. Safe return of displaced Muslim traders and herders to Carnot and Guen
3. Sustaining Carnot hospital and extending services to Gadzi, Amada-Gaza and Senkpa-Mbaéré
4. Agriculture, agro-processing and vocational training
5. Road links to Berbérati, Bouar and Bangui, and mobile coverage
6. Schools and teachers, especially in mining areas
7. Mine-site safety and land restoration

> **Opportunity for impact:** Health and skills programmes in mining communities can start now. Formalising mining requires prior due diligence on who controls the sites.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Mambéré-Kadéï

Current situation

- A September 2026 UN report describes the area as broadly calm. Daily UN police patrols on the roads to Carnot, Sosso-Nakombo, Nola and Gamboula have restored traders' confidence.
- Even so, restrictions on movement are among the country's worst, through illegal checkpoints, extortion and abductions. Attacks continue on the Berbérati–Sosso-Nakombo road.
- Armed groups remain active at the margins, including a 3R clash at Yamalé in 2025 and anti-Balaka movements near Nandobo in 2026.
- Dialogue on cattle corridors has eased farmer–herder conflict, but transhumance remains a flashpoint.

Priority interventions

1. Removing illegal checkpoints and securing the Sosso-Nakombo and Gamboula routes
2. Mapped transhumance corridors, mediation and compensation
3. Formalising artisanal diamond and gold mining
4. Christian–Muslim reconciliation and return of Muslim traders from Cameroon
5. Gender-based violence services, legal aid and accountable police
6. Berbérati regional hospital and rural schools
7. The Cameroon–CAR security dialogue

> **Opportunity for impact:** Berbérati's regional hospital serves the whole west, and market roads help traders directly. Existing corridor dialogue is a proven model to scale up.

Sangha-Mbaéré

Current situation

- Security is relatively stable. The prefecture escaped the worst of the conflict, and daily UN police patrols cover the Berbérati–Nola road.
- Conservation is a major employer. About 340 staff, including 140 rangers, work in the protected areas under joint management with WWF. One group of habituated gorillas reopened to tourists in 2025, with two more being prepared.
- State services are failing. In February 2026, health care at Nola prison had stopped entirely, with no water or power and a food allowance of 67 CFA francs (about US$0.12) per prisoner per day.

Priority interventions

1. Land and forest-use rights for the BaAka, a share of tourism and logging revenue, and adapted services
2. Enforcing logging plans and anti-poaching laws, with legal livelihoods for newcomers
3. Expanding gorilla and elephant tourism around Bayanga
4. Cooperatives, traceability and fair prices for diamond miners around Nola
5. Health centres, schools, water and humane detention in Nola and rural areas
6. Roads from Nola to Berbérati, Cameroon and Congo
7. Mobile clinics and vaccination for forest communities

> **Opportunity for impact:** Ecotourism is one of the few genuine growth opportunities in western CAR. It suits InvestCAR's investment promotion, provided BaAka communities share the benefits.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Category C: Stabilisation and reintegration

Bamingui-Bangoran

Current situation

- Security is improving but volatile. Nine FPRC and Siriri fighters demobilised in Ndélé in February 2026, and MINUSCA handed its Bamingui base to the government in June 2026. A grenade was thrown into an international NGO compound in Ndélé in February 2026.
- Sudan's war spills over through the Fertit region, and WFP feeds Sudanese refugees in Ndélé.
- Rule of law is very weak. There is no functioning prison, and detainees at Ndélé police station receive no state food.
- Services depend on NGOs. Sexual-violence care relies on Ndélé hospital, INTERSOS and MSF.

Priority interventions

1. Security and justice: trained police and gendarmes, a working court and prison, and safe roads
2. Reintegration of FPRC and Siriri fighters; Runga–Goula–Kara dialogue
3. Road links from Ndélé to Kaga-Bandoro, Bria and Birao, plus mobile coverage
4. Food security and peaceful transhumance
5. Ndélé hospital, rural health posts, and protection services
6. Shared water, schools and clinics for refugee-hosting communities
7. Conservation-linked jobs around the national park

> **Opportunity for impact:** Ndélé road links and shared services for refugees and hosts fall squarely within the Declaration's pillars. Park-related jobs offer a longer-term income source for former fighters.

Lim-Pendé

Current situation

- The 3R still holds armed positions across rural Lim-Pendé despite the peace deal. Tensions rose after three 3R fighters were killed at an army checkpoint.
- Sexual violence is the defining abuse. In February 2026, every conflict-related sexual-violence case attributed to signatory armed groups nationwide involved the 3R in Lim-Pendé.
- Farmer–herder revenge attacks continue, and the north-west is a main transhumance hotspot.
- Soldiers, sometimes alongside Russian-linked personnel, are reported to make arbitrary arrests and extort civilians. The prefecture has also received people fleeing violence in southern Chad, resettled at Bétoko.

Priority interventions

1. Completing 3R disarmament and reintegrating former fighters, especially Fulani youth
2. Medical, psychosocial and legal support for survivors, and safety for women in fields
3. Transhumance corridors, mediation committees and crop-damage compensation
4. Discipline and oversight of the army and Russian-linked personnel

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

5. Seeds, tools and market access
6. Rural health posts and schools in a densely populated, long-neglected area
7. Cross-border cooperation with Chad and Cameroon

> **Opportunity for impact:** Lim-Pendé has a large farming population, so agricultural support can reach many households. Siting water points and health posts to reduce women's exposure in fields is a practical protection measure.

Nana-Grébizi

Current situation

- The peace process is advancing. The MPC signed an agreement in N'Djamena in November 2025, and its disarmament resumed in mid-2026.
- Kidnappings and armed movements persist, including abductions at Grevaï, 30 km from Kaga-Bandoro, in March 2026.
- Herds destroyed fields at Kaga-Bandoro and Nana-Outa in February 2026, raising the risk of intercommunal violence.
- MINUSCA is closing its Mbrès base, which the Protection Cluster flags as a real risk to civilians. Kaga-Bandoro still had eight displacement sites as of March 2026.

Priority interventions

1. Reintegrating MPC fighters with jobs and training, and preventing splinter groups
2. Maintaining national-force presence and patrols around Mbrès as MINUSCA leaves
3. Transhumance corridors and mediation, building on local roundtables held since 2019
4. Return or local settlement for residents of the eight Kaga-Bandoro sites
5. A proper court and prison in Kaga-Bandoro, and an end to kidnapping for ransom
6. Inputs, storage and secure roads along the main trade corridor
7. Health, education and water around Mbrès and Nana-Outa

> **Opportunity for impact:** Kaga-Bandoro sits on the main national trade corridor. Farm support and storage there can serve returnees and former MPC fighters at the same time.

Nana-Mambéré

Current situation

- 3R disarmament is under way but incomplete. Fighters have been disarmed in stages at Bouar and Koui, a further operation for 100 fighters was planned in mid-2026, and MINUSCA handed over its Dilapoko base in June 2026.
- Residual 3R violence continues: six civilians were abducted at Gobolo in February 2026, and illegal livestock taxation continued at Zotoua.
- Four artisanal miners were killed at Zotoua-Banguerem. Clashes between 3R factions, one apparently working with Russian-linked personnel, raise concerns about collusion.
- Justice capacity is growing, with MINUSCA support for court open days and prison reform in Bouar.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Priority interventions

1. Completing 3R disarmament, with livestock and farming livelihoods for young herders
2. Removing armed checkpoints on livestock routes and preventing collusion by state-affiliated forces
3. Agreed corridors, livestock markets and fair dispute resolution between herders and farmers
4. Protecting miners around Yidéré-Baboua and Zotoua, with transparent oversight of mine revenues
5. Keeping the Bouar–Baboua–Garoua-Boulaï road to Cameroon safe and maintained
6. Courts that reach rural areas
7. Health, education and water in Abba, Baboua and Baoro

> **Opportunity for impact:** The Garoua-Boulaï road is CAR's main link to the sea through Cameroon. Investing in it serves the whole country while creating local jobs.

Ombella-M'Poko

Current situation

- Farmer–herder violence reaches the edge of the capital. Herders were killed around Bouboui, 35 km from Bangui, in January 2025, and near Sakoussa, 18 km away, in February 2026.
- The 3R operates this far south. About 50 3R members abducted two men on the Boali–Poste road in March 2026, and one was killed when his family could not pay a ransom of 3 million CFA francs (about US$3,000).
- The Protection Cluster ranks the prefecture among the worst for illegal checkpoints and extortion, and for witchcraft accusations and mob justice.
- The Boali hydro plants that supply Bangui are fragile. A rehabilitated court opened in Bossembélé in February 2026.

Priority interventions

1. Securing the Boali–Bossembélé–Yaloké corridor and completing 3R disarmament
2. Mapped corridors, mediation and compensation to break revenge cycles
3. Functioning courts, and protection for people accused of witchcraft
4. Maintenance, spare parts and new capacity at the Boali hydro plants
5. Helping farmers supply Bangui's market
6. Health, water and schools in Bogangolo and Damara
7. Removing illegal checkpoints on routes that feed Bangui

> **Opportunity for impact:** Boali is national infrastructure. Investment there secures Bangui's power and water and creates local jobs, while farm-to-Bangui supply chains offer quick income gains.

Ouaka

Current situation

- The UPC is demobilising. Its disarmament was launched in July 2025, and former UPC and 3R fighters began training as forest and water rangers in March 2026.
- Mining violence is the main flashpoint. On 26 March 2026, a self-defence group reportedly operating alongside Russian-linked personnel killed at least four artisanal miners at Ndassima.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

- State forces levy illegal taxes at checkpoints around Bambari. The central prison is overcrowded, with a food allowance of 93 CFA francs (about US$0.16) per prisoner per day.
- Ouaka still had 12 displacement sites as of March 2026, and MINUSCA handed over its Ippy and Kouango bases in June 2026.

Priority interventions

1. Protecting artisanal miners and channelling mining revenue into local development
2. Removing illegal checkpoints and controlling militias that work with Russian-linked personnel
3. Livelihoods for UPC fighters and support for host communities
4. Return or local integration for residents of the 12 displacement sites
5. Functioning courts, humane prisons and protection for people accused of witchcraft
6. Securing the Bambari–Ippy–Bria, Bambari–Alindao and Bambari–Grimari–Sibut routes
7. Health, education and water

> **Opportunity for impact:** Bambari is the regional market hub for the centre-east. Trade roads and the existing ranger-training model for former fighters are the clearest entry points.

Ouham

Current situation

- Residual rebels and abusive security operations both persist. In March 2026, FDLP fighters killed three Chadian nationals at a mining site near Markounda. A joint operation involving soldiers, Russian-linked personnel and UPC intermediaries looted a health centre and burned houses at Bowaye.
- An FDLP commander arrested at Kouki was handed to Russian-linked personnel without judicial notice, and his whereabouts were unknown at the time of reporting.
- Disarmament is slow. UPC fighters waited at Kouki from June 2025 until an operation for 120 UPC and 80 MPC fighters was scheduled for June 2026.
- Ouham is a main transhumance hotspot with high child recruitment. On the positive side, detention conditions at Nana-Bakassa improved after upgrades.

Priority interventions

1. Processing the fighters waiting at Kouki and bringing the FDLP and CPC remnants into the peace process
2. Ending the use of armed-group intermediaries and protecting health centres during operations
3. Corridors, mediation and compensation, especially along the Bossangoa–Chad road
4. Jobs, training and peace programmes, building on Bossangoa's youth resistance to recruitment
5. Protecting miners and traders around Markounda, and coordinating with Chad
6. Rebuilding looted health centres and supporting rural schools
7. Return for people displaced by fighting and recent operations

> **Opportunity for impact:** Bossangoa's young people have a track record of resisting recruitment. A youth employment programme there could become a model for other prefectures.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Ouham-Fafa

Current situation

- The MPC signed an agreement in November 2025 covering Ouham-Fafa, and its disarmament resumed in mid-2026.
- Ouham-Fafa has the country's largest concentration of displacement: 25 of CAR's 77 sites as of March 2026, at Batangafo (10), Bouca (8) and Kabo (7).
- Attacks still cause new displacement. Armed men attacked Yima, 18 km from Batangafo, in February 2026, displacing more than 100 people.
- Health care depends heavily on MSF, which runs Batangafo's 150-bed hospital and supports five health centres.

Priority interventions

1. Return or local settlement for residents of 25 sites, some displaced for a decade
2. Reintegrating MPC fighters around Sido and Kabo, with accountable national forces
3. Patrols and early warning on the Batangafo, Bouca and Kabo roads
4. Transhumance corridors and cooperation with Chad on herds entering through Sido and Kabo
5. A long-term future for Batangafo hospital and rural health centres beyond MSF
6. Seeds, tools and market access for returning families
7. Schools in sites and return areas, and alternatives to recruitment

> **Opportunity for impact:** Helping people leave displacement sites is the defining need. Farm restarts, shelter and schools in return areas could close sites and show visible results.

Ouham-Pendé

Current situation

- 3R disarmament has begun (73 fighters disarmed at Koui in March 2026), but the 3R still causes the most harm.
- In March 2026, Ouham-Pendé and Lim-Pendé together recorded more human rights violations than any other area, driven by 19 cases of 3R child recruitment. All girls aged 14 to 16 who suffered 3R sexual violence that month had also been recruited by the group.
- The 3R denied NGOs humanitarian access in February 2026, and clashes with self-defence groups displaced people from Ngoutéré and Bozoum.
- Transhumance attacks near Bocaranga in January 2026 killed civilians and caused heavy livestock losses.

Priority interventions

1. Releasing all children held by the 3R, then family reunification, care, schooling and protection from re-recruitment
2. Demobilising remaining fighters around Koui and Bocaranga, with livelihoods
3. Care for survivors of sexual violence, especially adolescent girls
4. Corridors, mediation and compensation for crop and livestock losses
5. Guaranteed safe access for aid agencies
6. Local benefit, safety and environmental safeguards for gold mining around Bozoum

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

7. Rebuilding health centres, schools and markets in Bocaranga, Koui and Ngoutéré

> **Opportunity for impact:** Schools and vocational training for children leaving the 3R fit the Declaration's education pillar directly. They are also the most urgent protection need in the prefecture.

Category D: Active conflict and emergency

Haute-Kotto

Current situation

- The Wagner Group controls rich mining sites around Bria and Sam-Ouandja. Civilians and miners report that it uses terror to enforce a monopoly.
- The LRA remains present. In February 2026, Haute-Kotto recorded more grave violations against children than any other prefecture.
- Sudan spillover has reached the north, with clashes on the Sam-Ouandja–Ouanda-Djallé road in March–April 2026.
- The Protection Cluster lists killings, sexual violence, abductions, illegal taxation and high child recruitment.

Priority interventions

1. Protection and accountable security, including monitoring of Russian-linked personnel
2. Formal, transparent artisanal-mining arrangements
3. Care, family tracing and schooling for children escaping armed groups
4. Durable solutions for long-term displaced people, such as at PK3
5. Roads from Bria to Ippy, Ouadda and Yalinga
6. Bria hospital, mobile clinics and sexual-violence services
7. Farming and non-mining livelihoods for young people

> **Opportunity for impact:** Bria hospital and mobile clinics are achievable now. Mining reform is the prize, but it is not workable while outside armed actors control the sites.

Haut-Mbomou

Current situation

- This is currently CAR's most violent prefecture. Fighting between the army and the AAKG militia has continued since the December 2025 elections, and in February 2026 it recorded more human rights violations than any other prefecture.
- Abuses come from all sides: the AAKG, state forces, Russian-linked personnel and a resurgent LRA. Peuhl and Muslim residents face particular hostility.
- About 30,000 people are displaced in the south-east. Aid operations were temporarily suspended, and the 300 km Bangassou–Zémio road takes 16–17 hours.
- Enrolment at Zémio's secondary school fell from 992 to 72 students in a year. One positive sign: about 700 people returned from DRC after a river crossing reopened in February 2026.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Priority interventions

1. Dialogue, hostage release and a disarmament path for the AAKG, with accountability on all sides
2. Safe access to fields, markets and roads for every community
3. Emergency shelter, food, water and health for about 30,000 displaced people
4. Securing and rehabilitating the Bangassou–Zémio–Obo road
5. Obo hospital, mobile clinics and sexual-violence care
6. Reopening schools and offering young people alternatives to recruitment
7. Azande–Peuhl reconciliation

Opportunity for impact: Supporting Obo hospital, the only referral facility, is the most realistic contribution. Larger investment should wait for a political settlement with the AAKG.

Mbomou

Current situation

- The Haut-Mbomou crisis is spilling over. The AAKG attacked an army detachment at Dembia on 3 February 2026.
- Mbomou had nine displacement sites as of March 2026, at Rafaï, Bangassou and Bakouma. About 1,500 Peuhl driven out of Zémio resettled around Bakouma, and Rafaï's hospital is strained.
- Aid access is fragile. Operations were temporarily suspended after attacks on aid teams, and militiamen entered a hospital looking for wounded soldiers. The Protection Cluster ranks Mbomou among the three prefectures at highest risk of attacks on civilians.
- Bangassou's prison is overcrowded, with children held alongside adults.

Priority interventions

1. Containing the AAKG conflict through dialogue, civilian protection and accountable forces
2. Return or local integration for Tokoyo's Muslims (displaced since 2017) and newly displaced Peuhl
3. Restoring Tokoyo's market and mosque, building on Bangassou's strong peace networks
4. Sustaining Bangassou's hospital, reinforcing Rafaï's, and mobile clinics for displacement sites
5. A functioning prison that separates children from adults
6. Securing the Bangassou–Rafaï–Zémio and Bangassou–Bakouma roads
7. Farming support and cross-river trade with DRC

Opportunity for impact: Bangassou's hospital and its Catholic and community peace networks give the Declaration a trusted local base. From there it can support services that help contain the crisis.

Vakaga

Current situation

- Vakaga is one of CAR's most acute crises, driven mainly by Sudan's war. As of June 2026, the Korsi site in Birao held about 24,800 Sudanese refugees, about a quarter of the prefecture's population. At Korsi, 52 people share each latrine.
- Before the influx, 46% of people were already food insecure and 89% of households could not afford a healthy diet.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

- RSF fighters have made incursions and recruited local youth. An attack on Am-Dafock on 30 June 2026 displaced about 17,000 people.
- Abuses by state forces and militias add to the danger. Soldiers fired on civilians at Ouanda-Djallé in February 2026, killing three. Vakaga recorded more incidents against aid workers than any other prefecture in January–July 2026. On the positive side, the prefect has banned child recruitment by self-defence groups.

Priority interventions

1. Disciplined forces on the Sudan border, an end to RSF incursions, and accountability for abuses
2. Food, water, sanitation and shelter at Korsi and for host communities
3. Shelter, protection and a path home for the 17,000 displaced from Am-Dafock
4. Safe access to fields, seed support and pre-positioned stocks before the rains
5. Rounga–Goula dialogue and control of self-defence groups
6. All-season roads or airstrip capacity, so Vakaga is not cut off for six months a year
7. Health and education in Birao and Ouanda-Djallé

> **Opportunity for impact:** Year-round access is the structural fix that every other intervention depends on. Pre-positioned food and seed stocks before the rainy season are the most practical near-term contribution.

Recommendations for the board

The board is asked to approve a phased, category-based delivery model and to authorise the partnerships needed for the priorities the Declaration's pillars do not cover.

1. **Phase delivery by category.**

- Phase 1: Bangui and the six recovery prefectures (Basse-Kotto, Kémo, Lobaye, Mambéré, Mambéré-Kadéï, Sangha-Mbaéré). Run full packages covering health, water, roads, farming and skills.
- Phase 2: The nine stabilisation prefectures. Link each package to a disarmament or farmer–herder process already under way.
- Phase 3: The four active-conflict prefectures. Until security allows more, limit work to supporting referral hospitals, food stocks and access, delivered through humanitarian partners.

1. **Select early flagships with visible results.** Strong candidates are backup solar power for Bangui's water pumping and hospitals, the Sibut health model extended across Kémo, Basse-Kotto's school and clinic rebuild, and water and sanitation in Lobaye to counter cholera.
2. **Make farmer–herder peace a cross-cutting design rule.** In the 11 prefectures where transhumance is a priority, site water points, markets and roads to support agreed corridors rather than undermine them.
3. **Design livelihoods for reintegration.** Make former fighters and at-risk youth an explicit target group for road labour, farm inputs and vocational training. The Ouaka ranger training and Bossangoa's youth resistance to recruitment are models to build on.
4. **Partner for what the pillars do not cover.** Security, justice, detention, disarmament and protection appear in most priority lists but sit outside the Declaration's six pillars. Formal links are needed with MINUSCA, the UN Protection Cluster, the national disarmament programme and justice-sector donors.
5. **Fill the humanitarian gap deliberately.** Target stabilised areas where humanitarian agencies are withdrawing, so that services such as Batangafo hospital (run by MSF) have a sustainable successor.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

6. **Put mining and investment under strict due diligence.** Before InvestCAR promotes mining, logging or related investment, require verification of who controls each site. Russian-linked actors dominate major mining areas and face serious abuse allegations.
7. **Commission next steps.** These include costing per prefecture, identifying implementing partners in each prefecture, setting baseline indicators, and a quarterly review of each prefecture's delivery category.

Risks and caveats

Risk	Where it bites	Mitigation
MINUSCA withdrawal leaves security gaps	Nana-Grébizi (Mbrès), Ouaka (Ippy, Kouango), Ouham (Markounda)	Phase entry to these areas, monitor protection data, and keep conflict-sensitive delivery plans
Association with abusive or sanctioned actors	Mining areas in Haute-Kotto, Lobaye, Ouaka, Mambéré and Nana-Mambéré; joint security operations	Vet partners and supply chains, and avoid mining-site investment until control is verified
Interventions inflame farmer–herder or intercommunal tension	North-west and centre; Haut-Mbomou; Vakaga	Assess conflict impacts and involve both communities in siting decisions
Attacks on aid workers and restricted access	Vakaga, Mbomou, Haut-Mbomou, Ouham-Pendé	Use local partners, plan access, and set clear suspension triggers
Seasonal isolation and supply-chain failure	Vakaga, Haut-Mbomou, Bamingui-Bangoran	Pre-position stocks before the rains and build maintenance into road contracts
Fuel and power shocks raise costs	National, especially Bangui	Use solar-first design and budget contingencies

Caveats on the evidence. The research describes conditions up to September 2026, and security in several prefectures can change within weeks. The delivery categories and theme counts are this briefing's own synthesis of the source material. Figures cited come from the underlying UN and NGO reporting summarised in the research files, and should be checked against the original reports before any external publication.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

PREFECTURES PROGRAMME · SECTION 7 OF 9

Who Could Do What

Roles for every partner

Who	What they can do	Where it counts most
Government and security forces	Replace MINUSCA with disciplined, accountable forces; remove illegal checkpoints; finish disarmament; make courts and prisons function	Nana-Grébizi, Ouaka, Ouham, Lim-Pendé
Prefecture representatives and local authorities	Report monthly to Bangui; flag risks early; hold every partner to the plan's priorities	All 20 prefectures
Communities, churches and traditional leaders	Run mediation committees; agree herding corridors; lead reconciliation and the return of displaced neighbours	Bangassou, Carnot, Kaga-Bandoro, Bossangoa
Donors and development partners	Keep funding stabilised prefectures before gains erode; finance Boali repairs, roads and health systems beyond NGOs	Bangui, Kémo, Basse-Kotto, Ouham-Fafa
Private investors	Back solar and thermal power, coffee and cassava processing, ecotourism and traceable mining cooperatives	Bangui, Lobaye, Sangha-Mbaéré, Mambéré
Neighbouring states	Coordinate on herds, refugees and armed groups; keep the Cameroon trade and fuel corridor open	Chad, Cameroon and Sudan borders
UN and humanitarian agencies	Hand over bases with protection plans; sustain police patrols; secure access for aid convoys	Haut-Mbomou, Mbomou, Vakaga

Each role already has a model to copy. A World Bank-backed maternity unit now gives Sibut's hospital a full package of care. Young people in Bossangoa refused rebel recruitment in 2020, which the prefect credits to local peace programmes. At Dzanga-Sangha, around 340 staff, including 140 rangers, protect the forest, and gorilla tourism reopened in 2025. CAR and Cameroon held their fourth round of border security talks in Berbérati in March 2025.

The test ahead

The next two years will be decided less by agreements than by delivery: a court that sits, a road that stays open through the rains, a former fighter with a farm instead of a gun. Humanitarian funding is shrinking, so stabilised prefectures risk being left behind just as they could start to grow.

The opportunity is real but time-bound. Those who act now, in the places the plan identifies, will decide whether 2026 is remembered as a pause or as the year the Central African Republic turned the corner.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

PREFECTURES PROGRAMME · SECTION 8 OF 9

Prefecture Representatives: Selection Criteria

Community nomination, independent vetting

It is essential that an appropriate person be identified to represent the activities in each prefecture, ideally a person not politically aligned, not a member of a rebel group, somebody who is respected by the community at large, who would be available to come to Bangui to report and strategise.

The approach suggested is to let communities do the nominating and use a vetting to filter.

1. Define the role

A terms of reference to be written: what they represent, what they report on, the monthly commitment, what they are paid (a stipend and travel costs, not a salary that makes them dependent), how long the term lasts.

2. Respected, non-aligned people to come from:

- **Religious leaders.** The Interfaith Platform (Catholic, Protestant and Muslim) has real credibility, but in mixed prefectures a single-faith representative can look partisan. A deputy from the other community, may work better.
- **Local peace and reconciliation committees.** Their members have already been chosen as cross-community figures in many areas.
- **Women's association leaders and market or cooperative heads.** They often have the broadest trust and fewer political ties.
- **Head teachers, nurses and health post heads.** They are known to everyone and have a stake in stability.
- **Traditional chiefs.** Formally auxiliaries of the administration, so are not truly independent, though their endorsement of whoever is chosen is important.

3. Source candidates through several independent channels

For each prefecture, ask NGOs working there (Caritas, CRS, Mercy Corps, NRC and others), church and mosque networks, MINUSCA civil affairs, and local women's or youth platforms.

4. Vet

- Candidates should be checked against the UN Panel of Experts reports and sanctions lists, and quietly asked about any past armed-group or self-defence militia links.
- Check for recent candidacies or party roles, given the recent electoral cycle.
- Check for business ties to mining or transhumance disputes.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

- Talk to people who might dislike the candidate, not just supporters. “Would the Peuhl / Muslim / displaced community in this area accept this person?”

5. Validate locally before announcing

Hold a small consultation in the prefecture capital so the community can endorse the choice openly. This also brings objections out early.

Prefecture candidate pools — West and North-West

These seven prefectures are farming, mining and transhumance country, so the decisive test is acceptance by both settled farmers and Peuhl herders. In every row, add the national networks above (PCRC antenna, Red Cross committee, Conseil Islamique imams, women's associations).

Prefecture (capital)	Context to manage	Lead nominating bodies	Ideal representative profile
Nana-Mambéré (Bouar)	Main cattle corridor to Cameroon; farmer–herder tension; artisanal mining around Bouar	Diocese of Bouar; Radio Siriri (diocesan) and Radio Maïgaro (community station broadcasting in Gbaya and Fulfulde); FNEC herders' delegation	Someone both Gbaya and Peuhl communities trust — e.g. a Maïgaro-network broadcaster or a retired school inspector
Mambéré (Carnot)	Created 2020 from Mambéré-Kadéï; diamond and gold areas; Muslim returnee communities	Carnot Catholic and Protestant parishes; local imams; diamond cooperatives	Teacher or health-post head with standing among returnees and miners
Mambéré-Kadéï (Berbérati)	CAR's second city (~104,000); diamond trade; Cameroon border trade via Gamboula	Archdiocese of Berbérati and its Caritas; Radio Zoukpana; Kimberley Process local monitoring committees and CLPRs set up in Berbérati communes	A commerce-literate civil-society figure who can also report on mining and cross-border trade
Ouham-Pendé (Bozoum)	Gold mining with foreign operators; land and pollution grievances	Bozoum Catholic mission (Diocese of Bouar); Evangelical churches; miners' and farmers' groups	Someone credible on mining-affected communities and environment
Lim-Pendé (Paoua)	Created 2020; most populous of the new prefectures (~440,000); borders Chad and Cameroon	Radio Pendé (Paoua community radio); Paoua parishes; Red Cross committee; women's groups	Grounded rural development worker; strong case for a woman representative
Ouham (Bossangoa)	Epicentre of 2013–14 sectarian violence; Muslim community returned	Diocese of Bossangoa and Radio Maria Be Africa; Bossangoa mosque committee; PCRC antenna	A proven reconciler — ideally nominated jointly by church and mosque
Ouham-Fafa (Batangafo)	Created 2020; large displacement history; armed-group presence around Batangafo and Kabo	Red Cross committees (Kabo volunteers trained with ICRC); parishes; health-facility staff	Health or humanitarian background; low public profile essential

Prefecture candidate pools — Centre and North

The centre and north are majority-Muslim or mixed, remote and still insecure in places, so Muslim nominators and traditional authorities matter as much as the churches. Vakaga and Bamingui-Bangoran need a remote-reporting fallback during the rainy season, when roads close.

Prefecture (capital)	Context to manage	Lead nominating bodies	Ideal representative profile
Kémo (Sibut)	Crossroads on the Bangui–north road; frequent displacement	Sibut parishes and mosque; Red Cross committee; farmers' cooperatives	Teacher or extension agent who travels the axes regularly
Nana-Gribizi (Kaga-Bandoro)	Transhumance and armed-group pressure; long ICRC presence	Diocese of Kaga-Bandoro; La Voix de la Kaga community radio; imams; Red Cross	Cross-community figure with humanitarian experience
Ouaka (Bambari)	Fourth city (~83,000); former UPC stronghold; dense NGO presence; your existing Ouaka data	Diocese of Bambari and Radio Be Oko; Radio Linga Bambari; Bambari mosque; women's and youth associations	Strong pilot candidate — use Ouaka to test the model first
Bamingui-Bangoran (Ndélé)	Majority Muslim; Sultanate of Ndélé is a key traditional authority; transhumance corridors; national parks	Sultanate's council; imams; Red Cross; NGO partners such as Première Urgence Internationale	Respected Muslim notable or educator acceptable to Runga, Goula and Christian minorities — not a member of the sultan's household
Vakaga (Birao)	~100,000 people, 1,000 km from Bangui; cut off in the rainy season; Arabic widely spoken; Sudanese refugee inflow	Sultan of Vakaga's council; imams; Radio Yata; NGOs present long-term (Triangle Génération Humanitaire, PUI, NRC)	Birao-based figure with Arabic, able to report by phone when travel is impossible

Prefecture candidate pools — East and South-East

The east carries the highest personal risk: through 2025 the UN recorded clashes between the Zande militia Azande Ani Kpi Gbe and the UPC in Haut-Mbomou, and Red Cross volunteers have been killed in Mbomou. Here, consider two co-representatives from different communities and keep both low-profile.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Prefecture (capital)	Context to manage	Lead nominating bodies	Ideal representative profile
Haute-Kotto (Bria)	Diamond economy; large displacement camps; 2019 prefecture-wide reconciliation forum	Radio Voix de Barangbaké (Bria community radio); Bria parishes and mosques; community leaders from the reconciliation forum	Respected forum participant with links to displaced and host communities
Basse-Kotto (Mobaye)	DRC border; Alindao is the main centre and seat of the diocese	Diocese of Alindao; Radio Magbadja (Alindao); Mobaye river-trade associations	Someone able to cover both Mobaye and Alindao
Mbomou (Bangassou)	~54,000 in Bangassou; cathedral sheltered Muslim displaced people during past violence	Diocese of Bangassou; Radio Mbari FM; Bangassou imams; women's associations	Church–mosque jointly endorsed figure; Bangassou diocese has strong international ties for safety support
Haut-Mbomou (Obo)	Zande majority; Peuhl and Muslim families displaced; militia–UPC tensions along Mboki–Zémio; very isolated	Radio Zéréda (Obo, broadcasts in Zande); local civil-society mediators and the Zémio CLPR trained in past peace projects; PCRC (mediated in Obo before)	Two co-representatives — one Zande, one from the Peuhl/Muslim community — reporting separately

Prefecture candidate pools — Bangui, Ombella-M'Poko and South-West

The south-west is forest country with BaAka indigenous communities, logging and conservation; Bangui is large enough to merit two representatives and could host the network coordinator.

Prefecture (capital)	Context to manage	Lead nominating bodies	Ideal representative profile
Bangui (Bangui; now includes Bimbo and Bégoua)	~1.4 million people; PK5 Muslim commercial district; all national bodies headquartered here	Archdiocese of Bangui and Radio Notre-Dame; Radio Voix de la Paix (Muslim); University of Bangui; Chambre de Commerce; CLPRs in the eight arrondissements, Bimbo and Bégoua	Two representatives — one covering central Bangui and PK5, one covering Bimbo/Bégoua — plus the network coordinator role
Ombella-M'Poko (Boali)	Capital moved to Boali in 2020; Boali hydro dam; Bossembélé, Yaloké and Damara along key roads	ICDI radio in Boali (broadcasts in Sango, French, Fulfulde and Aka); parishes; farmers' groups	Someone who covers the road towns and peri-urban farming belt
Lobaye (Mbaïki)	Forest, logging, coffee; BaAka communities; Mongoumba on the Ubangi river	Diocese of Mbaïki and Radio Songo; local NGOs working with BaAka; agricultural groups	A representative with credible links to BaAka communities, or a BaAka deputy
Sangha-Mbaéré (Nola)	Dzanga-Sangha Protected Areas (UNESCO World Heritage, co-managed with WWF); BaAka and Sangha-Sangha fishing communities; logging	Radio Kudilinga (Nola community radio); Dzanga-Sangha community-development partners; Bayanga local associations	Someone trusted by both BaAka and Bantu communities; conservation partners are useful references, not nominators

PREFECTURES PROGRAMME · SECTION 9 OF 9

Prefecture Representatives: Terms and Vetting

Terms of Reference and Vetting Checklist

Each prefecture to have one representative who is community-nominated, independently vetted and publicly validated before appointment. This document gives the role description, the selection process, vetting checklist to be completed for every candidate with validation and appointment. Use the same process in every prefecture.

Role. Prefecture Representative for the delivery of the Bangui Declaration aspirations. To be the programme's trusted link with communities in the prefecture: reporting what is happening on the ground, sector by sector, and helping shape priorities and delivery.

Term 12 months, renewable after review. Either side may end the arrangement with one month's notice. The programme may be terminated immediately for a breach of neutrality or conduct rules.

Responsibilities

1. Keep regular contact with community leaders, women's and youth groups, religious leaders, local authorities and civil society across the prefecture's sub-prefectures.
2. Report monthly on progress, obstacles and community concerns in each priority sector, using the standard reporting template.
3. Attend meeting in Bangui (or a regional hub when agreed), presenting the report and taking part in planning.
4. Explain programme decisions back to communities and gather feedback.
5. Flag emerging tensions, security risks or misuse of resources early and confidentially.
6. Help identify local partners, sites and beneficiaries, without taking part in procurement or payment decisions.

Conduct and neutrality

- No party office, candidacy or campaigning while in the role.
- No membership of, or support for, any armed group or self-defence militia.
- Declare any business, family or land interests connected to programme activities.
- Treat all communities, faiths and ethnic groups equally, including displaced, Peuhl and returnee communities.
- Make no promises of funds or jobs on the programme's behalf.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Profile sought

- Resident in the prefecture and widely known there.
- Respected across communities, faiths and ethnic groups.
- Fluent in Sango; working French for reporting.
- Women are strongly encouraged to apply.

Selection process

Allow about 6–8 weeks per prefecture from first contact to appointment.

1. **Map the prefecture.** List its sub-prefectures, main communities and faiths, displaced populations, armed-group presence and the NGOs and church or mosque networks active there.
2. **Request nominations separately.** Suggested channels:
   - an international or national NGO working in the prefecture
   - the Interfaith Platform or local church and mosque networks
   - MINUSCA civil affairs, where present
   - a local peace and reconciliation committee, or women's or youth platform
1. **Hold first conversations.** Meet each shortlisted person to explain the role and test their interest, availability and understanding of the prefecture's divisions.

Vetting checklist

Vet each candidate. Complete checklist for every shortlisted person. Use at least two people for reference calls, ideally one from outside the candidate's own community.

Compare and choose. Decide on a preferred candidate and a reserve.

Record reasons to proceed.

ACTIVITIES (ADDITIONAL) · SECTION 3 OF 4

Driving CSR and ESG Responsibility

Why every stakeholder should adopt CSR and ESG principles

A comprehensive & well-executed CSR & ESG strategy supports sustainable development, enhances investor confidence, improves access to capital, and contributes to the long-term success of projects

Why Every Stakeholder in the Central African Republic Should Adopt CSR and ESG Principles

The Central African Republic is opening a new chapter. Interest is growing in the country's minerals, forests, agricultural land and energy potential. Whether that interest becomes lasting investment and shared prosperity depends on one thing above all: trust. Corporate Social Responsibility (CSR) and Environmental, Social and Governance (ESG) principles are the common language through which that trust is built, and every stakeholder in CAR has a reason to adopt them.

Two principles, one purpose

ESG sets the standard for how an organisation is run and measured: its environmental impact, its treatment of people, and the integrity of its governance. CSR sets the standard for what an organisation gives back: lasting benefits for the communities in which it operates. ESG provides the evidence that investors can verify; CSR provides the benefits that communities can see. Together they turn economic activity into shared progress.

Why each stakeholder should adopt them

- Government and public institutions. Building ESG principles into regulation, concessions and procurement gives investors predictable rules and protects public revenues. It also helps formalise a sector on which an estimated 150,000 to 300,000 artisanal miners depend. Transparent revenue management strengthens the State's credibility at home and abroad.
- Investors and companies. In CAR the principal risks to any business, whether in mining, forestry, agriculture, energy, telecoms or construction, are social, security and governance risks. ESG makes those risks measurable and manageable. It also unlocks development finance and responsible capital on better terms and secures a licence to operate that no permit can grant alone.
- Financial institutions and development finance institutions. ESG criteria protect capital, improve the quality of the projects they finance and allow them to commit larger sums with confidence.
- Development partners and donors. Aligning their programmes with private-sector CSR multiplies their impact. Aid and investment can then work towards the same national priorities instead of running in parallel.
- Local businesses and SMEs. Meeting recognised standards on safety, ethics and quality is the entry ticket to supplying international firms, to winning contracts and to accessing credit.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

- Communities and civil society. CSR and ESG give citizens a voice in decisions on land, compensation and development priorities, and a recognised basis for holding companies and institutions to account. The benefits include jobs and skills for young people, enterprise for women, respect for indigenous peoples including the BaAka, and shared infrastructure. That infrastructure is badly needed in a country where fewer than one in five people have electricity.

A common standard for all

The principles are the same whoever applies them:

- Environment. Protecting water, forests and biodiversity, rehabilitating land, and using renewable energy where feasible.
- Social. Consulting early and continuously, respecting human rights in all security arrangements, eliminating child labour, and advancing gender equality.
- Governance. Controlling corruption, keeping supply chains traceable, and reporting publicly with independent audits.
- Community investment. Local employment and training, SME support, health, education and clean water, all delivered in partnership and aligned with national development priorities.

The collective dividend

Each stakeholder benefits from adopting CSR and ESG principles, but the greatest reward comes when all adopt them together. A country where government, investors, financiers, partners, businesses and communities work to the same standards becomes predictable, bankable and attractive. In CAR, that joint action is not a cost of development; it is the foundation on which a stable and prosperous future can be built.

ACTIVITIES (ADDITIONAL) · SECTION 4 OF 4

Furthering National Development

Task Force activities

Task Force to bring together, operators, investors, government and industry stakeholders to share knowledge and create strategies for initiatives that will accelerate the progress of sustainable localization and local content.

- **Development of Services Sector;** Task Force will consider current challenges and forthcoming opportunities for the development of the Services sector as part of a strategy to develop greater indigenous capability in the sector; these activities to include attracting cooperation agreements with technology transfer.
- **Development of Manufacturing Sector;** Task Force will consider current challenges and forthcoming opportunities for the development of Manufacturing industries as part of a strategy to develop greater indigenous capability; these activities to include attracting cooperation agreements with technology transfer
- **Industrial Capacity Register;** as a source of reference to identify current and potential capacity. Task Force will aim to understand best national industry practice and consider how these efforts could be assisted.
- **Standards, Tendering Processes, Specifications, Code of Practice, Health & Safety;** Task Force will consider how harmonisation can be linked to a Code of Practice
- **Training, Skills, Human Resource Development**; Task Force will assemble available information on the programmes underway, develop a collective understanding and identify strategies to accelerate progress
- **Research and Development;** Task Force to make a strong connection to current R&D programmes that are taking place and to identify additional opportunities in that effort.

Development of Services Sector

Looks at growing services such as finance, telecommunications, tourism, transport and professional services. Identifies how investment and skills can create jobs and support every other sector.

Development of Manufacturing Sector

Examines opportunities to process raw materials in the country rather than exporting them unprocessed, from food and timber to building materials. Considers the power, finance and skills required.

Industrial Capacity Register

Proposes a register of the country's existing industrial and technical capacity: firms, facilities, equipment and skills. Helps partners find local suppliers and see where capacity needs to be built.

Queries: **Lord Waverley** · office@lordwaverley.com · WhatsApp +236 72 08 58 52

Harmonise Code of Practice

Proposes common standards of practice for participating companies and partners, so that work is carried out consistently and transparently. Covers quality, safety, conduct and reporting.

Training, Skills, Human Resource Development

Covers vocational training, apprenticeships and professional development linked to real jobs. Focuses on skills in demand, such as construction, agriculture, electrical work, mechanics and digital services.

Research and Development

Considers how research, data and innovation can support development, from agricultural research to studies that guide investment. Looks at partnerships with universities and research institutions.
